Observing and Recording the Behavior of Young Children, Sixth Edition Jul 07 2020 In the Sixth Edition of their classic text, the authors reiterate the critical importance of observing and recording the behavior of young children, especially in the current atmosphere of accountability and testing. In addition, because children with special needs are now widely included in a majority of early childhood classrooms, they have completely rewritten a chapter to focus more broadly on observing behaviors that may be viewed as disquieting. Designed to help teachers better understand children's behavior, the book outlines methods for recordkeeping that provide a realistic picture of each child's interactions and experiences in the classroom. Numerous examples of teachers' observations of children from birth to age 8 enrich this work and make it accessible, practical, and enjoyable to read. With more than 130,000 copies in print, this valuable resource for pre- and inservice educators features: Fresh information about how children think and learn, how their language develops, and how their families, their culture, and their environment influence and help to shape them. Observations that reflect the increasingly diverse population in contemporary early childhood classrooms. The imperative for teachers to widen their lens in order to meet the needs of young children with a range of developmental capacities, abilities, and behaviors. "Responds to new knowledge about how children think, learn and develop language, and about the influences of families, culture, and other environmental influences."
—Zero to Three (previous edition)

Measuring Childcare Practices Oct 10 2020 To thrive, young children need more than food. It is now widely recognized that they also require a healthy and sanitary environment and adequate care and feeding practices. As governments and NGOs initiate programs to ensure child survival, health, and development, the need for simple methods and indicators to measure the effectiveness of these programs grows. With a strong focus on methodology, this food policy review describes measurement approaches, problems, and solutions and offers practical suggestions for monitoring and evaluating child nutrition programs.

Transforming the Workforce for Children Birth Through Age 8 Oct 02 2022 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Eager to Learn Sep 01 2022 Clearly babies come into the world remarkably receptive to its wonders. Their alertness to sights, sounds, and even abstract concepts makes them inquisitive explorers—and learners—every waking minute. Well before formal schooling begins, children's early experiences lay the foundations for their later social behavior, emotional regulation, and literacy. Yet, for a variety of reasons, far too little attention is given to the quality of these crucial years. Outmoded theories, outdated facts, and undersized budgets all play a part in the uneven quality of early childhood programs throughout our country. What will it take to provide better early education and care for our children between the ages of two and five? Eager to Learn explores this crucial question, synthesizing the newest research findings on how young children learn and the impact of early learning. Key discoveries in how young children learn are reviewed in language accessible to parents as well as educators: findings about the interplay of biology and environment, variations in learning among individuals and children from different social and economic groups, and the importance of health, safety, nutrition and interpersonal warmth to early learning. Perhaps most significant, the book documents how very early in life learning really begins. Valuable conclusions and recommendations are presented in the areas of the teacher-child relationship, the organization and content of curriculum, meeting the needs of those children most at risk of school failure, teacher preparation, assessment of teaching and learning, and more. The book discusses: Evidence for competing theories, models, and approaches in the field and a hard look at some day-to-day practices and activities generally used in preschool. The role of the teacher, the importance of peer interactions, and other relationships in the child's life. Learning needs of minority children, children with disabilities, and other special groups. Approaches to assessing young children's learning for the purposes of policy decisions, diagnosis of educational difficulties, and instructional planning. Preparation and continuing development of teachers. Eager to Learn presents a comprehensive, coherent picture of early childhood learning, along with a clear path toward improving this important stage of life for all children.

Parenting Matters Nov 10 2020 Decades of research have demonstrated that the parent-child dyad and the environment of the familyâ€"which includes all primary caregiversâ€"are at

the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

The Importance of Being Little Nov 30 2019 "Christakis . . . expertly weaves academic research, personal experience and anecdotal evidence into her book . . . a bracing and convincing case that early education has reached a point of crisis . . . her book is a rare thing: a serious work of research that also happens to be well-written and personal . . . engaging and important." --Washington Post "What kids need from grown-ups (but aren't getting)...an impassioned plea for educators and parents to put down the worksheets and flash cards, ditch the tired craft projects (yes, you, Thanksgiving Handprint Turkey) and exotic vocabulary lessons, and double-down on one, simple word: play." --NPR The New York Times bestseller that provides a bold challenge to the conventional wisdom about early childhood, with a pragmatic program to encourage parents and teachers to rethink how and where young children learn best by taking the child's eye view of the learning environment To a four-year-old watching bulldozers at a construction site or chasing butterflies in flight, the world is awash with promise. Little children come into the world hardwired to learn in virtually any setting and about any matter. Yet in today's preschool and kindergarten classrooms, learning has been reduced to scripted lessons and suspect metrics that too often undervalue a child's intelligence while overtaxing the child's growing brain. These mismatched expectations wreak havoc on the family: parents fear that if they choose the "wrong" program, their child won't get into the "right" college. But Yale early childhood expert Erika Christakis says our fears are wildly misplaced. Our anxiety about preparing and safeguarding our children's future seems to have reached a fever pitch at a time when, ironically, science gives us more certainty than ever before that young children are exceptionally strong thinkers. In her pathbreaking book, Christakis explains what it's like to be a young child in America today, in a world designed by and for adults, where we have confused schooling with learning. She offers real-life solutions to real-life issues, with nuance and direction that takes us far beyond the usual prescriptions for fewer tests, more play. She looks at children's use of language, their artistic expressions, the way their imaginations grow, and how they build deep emotional bonds to stretch the boundaries of their small worlds. Rather than clutter their worlds with more and more stuff, sometimes the wisest course for us is to learn how to get out of their way. Christakis's message is energizing and reassuring: young children are inherently powerful, and they (and their parents) will flourish when we learn new ways of restoring the vital early learning environment to one that is best suited to the littlest learners. This bold and pragmatic challenge to the conventional wisdom peels back the mystery of childhood, revealing a place that's rich with possibility.

International Perspectives on Child and Adolescent Mental Health May 17 2021 There has been a major shift in the way we conceptualize and provide services to children and adolescents with mental health needs. We are moving away from the traditional disorder-oriented model of treatment to a child-centered, family-focused service delivery system that mandates mental health services in the context of the child's family and social ecology. This new system of care has spawned many variations of the model, including wraparound services, multisystemic treatment (MST), futures planning, and person-centred planning. As systems of care are different across countries and cultures, it is imperative that we share our knowledge and make explicit the lessons we have learned in our attempts to provide services to children and adolescents which focus on improving their quality of life rather than merely treating their psychiatric disorders and psychological problems. There is an urgent need to evaluate the various treatments being offered to children and adolescents with mental health needs. Empirical data on outcomes will determine the funding and delivery of services. As such, the latest research on treatment outcomes needs to be disseminated so that new and validated treatment methods can be implemented rapidly.

Teacher–Child Interactions in Early Childhood Education and Care Classrooms Aug 08 2020 How children’s development is shaped by Early Childhood Education and Care (ECEC) classrooms and especially by teacher–child interactions in those settings is a major issue in research and politics, which has been researched for several decades. This book investigates this important topic by raising three overarching questions: (1) What are ‘good’ teacher–child interactions and how they can be measured? (2) Which individual and/or contextual aspects are associated with teacher–child interactions? (3) What is the impact of teacher–child interactions on the development of children's competencies? The book ties in these fundamental questions with educational research by bringing together international studies from interdisciplinary backgrounds and presenting current research on the characteristics, predictivity, dependency, and methodological issues of teacher–child interactions in ECEC classrooms. The considered studies conducted in Australia, Austria, Finland, Germany, Greece and Portugal each aim to enrich the scientific discourse and provide fruitful implications for policy and practice. This book was originally published as a special issue of the *Research Papers in Education* journal.
