This book presents real-life IoT applications based on the Raspberry Pi, beyond the relatively simplistic demos built for educational purposes or hobbyists. You'll make the transition from tinkering with a couple of sensors and simple devices to building fully developed products for commercial use and industrial systems. You'll also work with sensors and actuators, web technologies used for communications in IoT networks, and the large-scale deployment of IoT software solutions. And see how to design these systems as well as maintain them long term. See the Raspberry Pi in a new light that highlights the true industrial potential of the device. Move beyond connecting an LED to the Raspberry Pi and making it blink to actually managing a network of IoT devices. What You'll Learn Design industrial and large scale professional Internet of Things systems Extend your basic IoT knowledge by building advanced products Learn how large scale IoT systems are deployed and maintained Who This Book Is For Advanced hobbyists who want to stretch their abilities into the professional sector. Also professional industrial engineers looking for low-cost solutions to basic IoT needs.

Principles of Desalination Aug 27 2019 Principles of Desalination, Second Edition, Part B focuses on the processes that remove salt and other minerals from saline water. This book consists of five chapters. Chapter 7 focuses on the conversion of saline water to fresh water by freezing, while Chapter 8 describes "hyperfiltration , which is the separation of salts and other low- molecular-weight solutes from solvent by passage under pressure through a selective membrane. The processes, equipment, control devices, and chemical products involved in ultrapure water are outlined in Chapter 9. Chapter 10 covers the mineral-scale problem, chemistry of alkaline scaling, physical factors in scale deposition, and techniques for scale abatement and control. The conversion of radiant energy into forms useful for desalination is elaborated in the last chapter. This publication is a good source for students and researchers conducting work on the principles of desalination.

The Fashionable P. I. Nov 10 2020 Do clothes really make the woman? For Jordan Devereaux, President of Devereaux Designs, the answer is most certainly yes. Having taken over the upscale women's clothing company from her father, she lives and breathes high fashion design.

Although the company was her father's baby and she knows she'll support his dream no matter what, catering to the wealthy and elite feels empty to Jordan. What she really wants is a way to give back to the community, to fill her heart with something meaningful. Being the eldest of five in a close-knit, supportive family, she knows exactly how lucky she is, so when she tries to volunteer her time at a runaway shelter and stumbles onto a family in crisis, she finds her calling. Then a friend in need asks for her help and with her private investigator experience, she jumps at the chance. Is it nature or nurture? Jack Morgan really had no answer for that question, though he and his adoptive mother asked it often enough during his youth. At age fourteen, the question is suddenly moot because he is once again left alone in life. He finds his way into adulthood on his own and after a failed attempt at a long-term relationship, Jack decides it is easiest to live alone, to be alone. But a spur-of-the-moment decision and a chance meeting changes his life, bringing him closer than ever to his deepest desire and his darkest fear.
