Philosophy of Mind in the Nineteenth Century Apr 09 2021 Between the publication of Kant's Critique of Pure Reason in 1781 and Husserl's Ideas in 1913, the nineteenth century is a pivotal period in the philosophy of mind, witnessing the emergence of the phenomenological and analytical traditions which continue to shape philosophical debate in fundamental ways. The nineteenth century also challenged many prevailing assumptions about the transparency of the mind, particularly in the ideas of Nietzsche and Freud, whilst at the same time witnessing the birth of modern psychology in the work of William James. Covering the main figures of German idealism to the birth of the phenomenological movement under Brentano and Husserl, *Philosophy of Mind in the Nineteenth Century* provides an outstanding survey to these new directions in philosophy of mind. Following an introduction by Sandra Lapointe, fourteen specially commissioned chapters by an international team of contributors discuss key topics, thinkers and debates, including: German idealism Bolzano Johann Friedrich Herbart Ernst Mach Helmholtz Nietzsche William James Sigmund Freud Brentano's early philosophy of mind Meinong Christian von Ehrenfels Husserl Natorp. Essential reading for students and researchers in philosophy of mind, continental philosophy, and the history of philosophy, *Philosophy of Mind in the Nineteenth Century* is also a valuable resource for those in related disciplines such as Psychology, Religion, and Literature.

How Can Physics Underlie the Mind? Jul 20 2019 Physics underlies all complexity, including our own existence: how is this possible? How can our own lives emerge from interactions of electrons, protons, and neutrons? This book considers the interaction of physical and non-physical causation in complex systems such as living beings, and in particular in the human brain, relating this to the emergence of higher levels of complexity with real causal powers. In particular it explores the idea of top-down causation, which is the key effect allowing the emergence of true complexity and also enables the causal efficacy of non-physical entities, including the value of money, social conventions, and ethical choices.

What's Going on in There? Mar 20 2022 As a research neuroscientist, Lise Eliot has made the study of the human brain her life's work. But it wasn't until she was pregnant with her first child that she became intrigued with the study of brain development. She wanted to know precisely how the baby's brain is formed, and when and how each sense, skill, and cognitive ability is developed. And just as important, she was interested in finding out how her role as a nurturer can affect this complex process. How much of her baby's development is genetically ordained--and how much is determined by environment? Is there anything parents can do to make their babies' brains work better--to help them become smarter, happier people? Drawing upon the exploding research in this field as well as the stories of real children, *What's Going On in There?* is a lively and thought-provoking book that charts the brain's development from conception through the critical first five years. In examining the many factors that play crucial roles in that process, *What's Going On in There?* explores the evolution of the senses, motor skills, social and emotional behaviors, and mental functions such as attention, language, memory, reasoning, and intelligence. This remarkable book also discusses: how a baby's brain is "assembled" from scratch the critical prenatal factors that shape brain development how the birthing process itself affects the brain which forms of stimulation are most effective at promoting cognitive development how boys' and girls' brains develop differently how nutrition, stress, and other physical and social factors can permanently affect a child's brain Brilliantly blending cutting-edge science with a mother's wisdom and insight, *What's Going On in There?* is an invaluable contribution to the nature versus nurture debate. Children's development is determined both by the genes they are born with and the richness of their early environment. This timely and important book shows parents the innumerable ways in which they can actually help their children grow better brains.

Bodies and Persons Oct 15 2021 Large-scale comparisons are out of fashion in anthropology, but this book suggests a bold comparative approach to broad cultural differences between Africa and Melanesia. Its theme is personhood, which is understood in terms of what anthropologists call 'embodiment'. These concepts are applied to questions ranging from the meanings of spirit possession, to the logics of witchcraft and kinship relations, the use of rituals to heal the sick, 'electric vampires', and even the impact of capitalism. There are detailed

ethnographic analyses, and suggestive comparisons of classic African and Melanesian ethnographic cases, such as the Nuer and the Melpa. The contributors debate alternative strategies for cross-cultural comparison, and demonstrate that there is a surprising range of continuities, putting in question common assumptions about the huge differences between these two parts of the world.

The Mind of God May 10 2021 For fans of Deepak Chopra, Rudy Tanzi, and Andrew Newberg. A renowned behavioral neurologist provides insights to some of the most curious spiritual questions we all face. Is there a God? It's a question billions of people have asked since the dawn of time. You would think by now we'd have a satisfactory, universal answer. No such luck...Or maybe we do and we just need to look in the right place. For Dr. Jay Lombard that place is the brain, and more importantly the mind, that center of awareness and consciousness that creates reality. In *The Mind of God*, Dr. Lombard employs case studies from his own behavioral neurology practice to explore the spiritual conundrums that we all ask ourselves: What is the nature of God? Does my life have purpose? What's the meaning of our existence? Are we free? What happens to us when we die? For Lombard, these metaphysical questions are a jumping-off point for exploring the brain in search of the seat of the soul. It is neuroscience, the author contends, and how we and our brains interpret what's going on around us that can lead us to a deeper and more fulfilling faith. Mixing his personal experiences in the medical field (including compelling cases such as the male patient who really thought he was pregnant and a woman who literally scared herself to death) along with his own visionary insight into spiritual experience, Lombard has much to tell us about the nature and power of belief—and what we can do to focus our beliefs in a positive direction. If you want to find more meaning in your life or are searching for a deeper understanding of why we believe what we believe, then this book can lead to an exciting transformation in the way you see and understand the world around you. With cutting-edge research and provocative case studies, renowned behavioral neurologist provides insights to some of the most curious spiritual questions of mortality.
