Dec 22 2021 Cambridge Global

English is a nine-stage language-rich course for learners of English as a Second Language, following the Cambridge International Examinations curriculum framework. Teacher's Resource 6 provides step-by-step guidance notes for teachers for each lesson in every unit to support teaching the content of Learner's Book 6. Notes on Activity Book 6 are also

included. A unit overview provides a snapshot of lesson objectives and the language and skills covered. The notes include answer keys to activities in the Learner's Book and Activity Book, complete audio scripts, suggestions for differentiation and assessment, cross-curricular links, portfolio opportunities and additional unit-linked photocopiable activities and unit-based wordlists.

Comparative Evaluation of Multilingual Information Access Systems

Jan 11 2021

The fourth campaign of the Cross-language Evaluation Forum (CLEF) for European languages was held from January to August 2003. Participation in this campaign showed a slight rise in the number of participants from the previous year, with 42 groups submitting results for one or more of the different tracks (compared with 37 in 2002), but a steep rise in the number of experiments attempted. A distinctive feature of CLEF 2003 was the number of new tracks and tasks that were offered as pilot experiments. The aim was to try out new ideas and to encourage the development of new evaluation methodologies, suited to the emerging requirements of both system developers and users with respect to today's digital collections and to encourage work on many European languages rather than just those most widely used. CLEF

is thus gradually pushing its participants towards the ultimate goal: the development of truly multilingual systems capable of processing collections in diverse media. The campaign culminated in a two-day workshop held in Trondheim, Norway, 21-22 August, immediately following the 7th European Conference on Digital Libraries (ECDL 2003), and attended by more than 70 researchers and system developers. The objective of the workshop was to bring together the groups that had participated in the CLEF 2003 campaign so that they could report on the results of their experiments.

2020 As a new medium for questionnaire delivery, the Internet has the potential to revolutionize the survey process. Online (Web-based) questionnaires provide several advantages over traditional survey methods in terms of cost, speed, appearance, flexibility, functionality, and usability [Bandilla et al. 2003; Dillman 2000; Kwak & Radler 2002]. Online-questionnaires can provide many capabilities not found in traditional paper-based questionnaires: they can include pop-up instructions and error messages; they can incorporate links; and it is possible to encode difficult skip patterns making such patterns virtually invisible to respondents. Despite this, and the emergence of numerous tools to support online-questionnaire creation, current electronic survey design typically replicates the look-and-feel of paper-based questionnaires, thus failing to harness the full power of the

electronic survey medium. A recent environmental scan of online-questionnaire design tools found that little, if any, support is incorporated within these tools to guide questionnaire design according to best-practice [Lumsden & Morgan 2005]. This paper briefly introduces a comprehensive set of guidelines for the design of online-questionnaires. It then focuses on an informal observational study that has been conducted as an initial assessment of the value of the set of guidelines as a practical reference guide during online-questionnaire design.

2 Background

Online-questionnaires are often criticized in terms of their vulnerability to the four standard survey error types: namely, coverage, non-response, sampling, and measurement errors.

My Book of Computer

Studies for Class 1 Sep 18

2021 We are pleased to present the series My Book of Computer Studies for Classes 1 to 8, based on the latest curriculum prepared and recommended by the Council for the Indian School Certificate Examinations, New Delhi, to be effective from the academic year 2017-18 and onwards. This new curriculum provides children with opportunities to use modern technology to enhance their learning in all subjects. It also ensures that children become digitally literate, i.e., able to use, and express themselves

and develop their ideas through ICT for the future workplace and as an active participant in the digital world.

IGCSE Computer Science Revision Guide follows the Cambridge IGCSE (0478) and Cambridge O Level (2210) Computer Science syllabuses, matching the syllabus for examination from 2015. The book instils confidence and thorough understanding of the topics learned by the students as they revise for examinations, and is written in a clear and straightforward tone to assist learning concepts and theories. This revision guide is endorsed by Cambridge International Examinations.

Flexible Query Answering Systems Apr 25 2022 Flexible Query Answering Systems is an edited collection of contributed chapters. It focuses on developing computer systems capable of transforming a query into an answer with useful information. The emphasis is on problems associated with high-level intelligent answering systems. The coverage is multidisciplinary with chapters by authors from information science, logic, fuzzy systems, databases, artificial

intelligence and knowledge representation. Each contribution represents a theory involving flexibility in query-answering, and each addresses specific answering problems. Coverage includes topics such as fuzzy sets in flexible querying, non-standard database interactions, metareasoning and agents, and many others. Contributions for this volume were written by leading researchers from their respective subject areas, including Patrick Bosc, Bernadette Bouchon-Meunier, Amihai Motro, Henri Prade and Ron Yager, among others. Flexible Query Answering Systems is a timely contribution for researchers working on high-level query mechanism systems.

Colors 4 Teacher's Book Oct 20

2021 American English Primary Colors is a new 4-level course for young learners. It is packed with fun activities which ensure that children use English in a purposeful way. Right from the start, they are fully involved in thinking for themselves, doing things for themselves and making things themselves, all of which is underpinned by a strong structural syllabus. The Student's Books have engaging stories, puzzles, games, songs and chants, and craft activities. The course includes Activity Books, Teacher's Books, Class Audio CDs, Songs/Songs and Stories CDs, and Vocabulary

Cards. The course encourages children to think about the world around them and, at the higher levels, to make connections with other areas of the curriculum. This approach makes language learning meaningful and memorable.

Making Doctors Sep 06 2020

Few outsiders realize that student illness is frequently, and ironically, a by-product of medical training. This unique study by a medical doctor and trained anthropologist debunks popular myths of expertise and authority which surround the medical establishment and asks provoking questions about the acquisition and dissemination of knowledge within the field. In detailing all levels of basic training in a London medical school, the author describes students' 'official' activities (that is, what they need to do to qualify) as well as their 'unofficial' ones (such as their social life in the bar). This insider's exposé should prompt a serious reconsideration of abuses in a profession which has a critical influence over untold lives. In particular, it suggests that the structures and discourses of power need to be re-examined in order to provide satisfactory answers to

sensitive questions relating to gender and race, the dialogue between doctor and patient and the mental stability of students under severe stress.

Interactive Multi-modal

Question-Answering Aug 18

2021 This book is the result of a group of researchers from

different disciplines asking themselves one question: what does it take to develop a computer interface that listens, talks, and can answer questions in a domain? First, obviously, it takes specialized modules for speech recognition and synthesis, human interaction management (dialogue, input fusion, and multimodal output fusion), basic question understanding, and answer finding. While all modules are researched as independent subfields, this book describes the development of state-of-the-art modules and their integration into a single, working application capable of answering medical (encyclopedic) questions such as "How long is a person with measles contagious?" or "How can I prevent RSI?". The contributions in this book, which grew out of the IMIX project funded by the Netherlands Organisation for Scientific Research, document the development of this system, but also address more general issues in natural language

processing, such as the development of multidimensional dialogue systems, the acquisition of taxonomic knowledge from text, answer fusion, sequence processing for domain-specific entity recognition, and syntactic parsing for question answering. Together, they offer an overview of the most important findings and lessons learned in the scope of the IMIX project, making the book of interest to both academic and commercial developers of human-machine interaction systems in Dutch or any other language. Highlights include: integrating multi-modal input fusion in dialogue management (Van Schooten and Op den Akker), state-of-the-art approaches to the extraction of term variants (Van der Plas, Tiedemann, and Fahmi; Tjong Kim Sang, Hofmann, and De Rijke), and multi-modal answer fusion (two chapters by Van Hooijdonk, Bosma, Krahmer, Maes, Theune, and Marsi). Watch the IMIX movie at www.nwo.nl/imix-film. Like IBM's Watson, the IMIX system

described in the book gives naturally phrased responses to naturally posed questions. Where Watson can only generate synthetic speech, the IMIX system also recognizes speech. On the other hand, Watson is able to win a television quiz, while the IMIX system is domain-specific, answering only to medical questions. "The Netherlands has always been one of the leaders in the general field of Human Language Technology, and IMIX is no exception. It was a very ambitious program, with a remarkably successful performance leading to interesting results. The teams covered a remarkable amount of territory in the general sphere of multimodal question answering and information delivery, question answering, information extraction and component technologies." Biometric Authentication Jul 25 2019

Biometric authentication refers to identifying an individual based on his or her distinguishing physiological and/or behavioral characteristics. It associates an individual with a previously determined identity based on that individual's appearance or behavior. Because many physiological or behavioral characteristics (biometric indicators) are distinctive to each person, biometric identifiers are inherently more reliable and more capable than knowledge-based (e.g., password) and token-based (e.g., a key) techniques in differentiating between an

authorized person and a fraudulent impostor. For this reason, more and more organizations are looking to automated identity authentication systems to improve customer satisfaction, security, and operating efficiency as well as to save critical resources. Biometric authentication is a challenging pattern recognition problem; it involves more than just template matching. The intrinsic nature of biometric data must be carefully studied, analyzed, and its properties taken into account in developing suitable representation and matching algorithms. The intrinsic variability of data with time and environmental conditions, the social acceptability and invasiveness of acquisition devices, and the facility with which the data can be counterfeited must be considered in the choice of a biometric indicator for a given application. In order to deploy a biometric authentication system, one must consider its reliability, accuracy,

applicability, and efficiency. Eventually, it may be necessary to combine several biometric

indicators (multimodal-biometrics) to cope with the drawbacks of the individual biometric indicators.
