*Gut* Sep 19 2019 WINNER OF THE 2016 AUSTRALIAN BOOK INDUSTRY AWARDS, INTERNATIONAL BOOK OF THE YEAR SHORTLISTED FOR THE 2016 BRITISH BOOK INDUSTRY AWARDS, NON-FICTION BOOK OF THE YEAR LONGLISTED FOR THE 2015 GOODREADS CHOICE AWARDS 'BEST SCIENCE & TECHNOLOGY BOOK' A Sunday Times bestseller The key to living a happier, healthier life is inside us. Our gut is almost as important to us as our brain or our heart, yet we know very little about how it works. In *Gut*, Giulia Enders shows that rather than the utilitarian and - let's be honest - somewhat embarrassing body part we imagine it to be, it is one of the most complex, important, and even miraculous parts of our anatomy. And scientists are only just discovering quite how much it has to offer; new research shows that gut bacteria can play a role in everything from obesity and allergies to Alzheimer's. Beginning with the personal experience of illness that inspired her research, and going on to explain everything from the basics of nutrient absorption to the latest science linking bowel bacteria with depression, Enders has written an entertaining, informative health handbook. *Gut* definitely shows that we can all benefit from getting to know the wondrous world of our inner workings. In this charming book, young scientist Giulia Enders takes us on a fascinating tour of our insides. Her message is simple - if we treat our gut well, it will treat us well in return. But how do we do that? And why do we need to? Find out in this surprising, and surprisingly funny, exploration of the least understood of our organs. PRAISE FOR GIULIA ENDERS 'A publishing sensation that ... sets out to free toilet talk from its taboo' The Times 'Enders' gut manifesto calls on its readers to celebrate their lower bodies' achievements, rather than apologise for them' The Guardian

Concepts of Biology Jul 22 2022 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at

hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

*The Exocrine Pancreas* Nov 14 2021 The secretions of the exocrine pancreas provide for digestion of a meal into components that are then available for processing and absorption by the intestinal epithelium. Without the exocrine pancreas, malabsorption and malnutrition result. This chapter describes the cellular participants responsible for the secretion of digestive enzymes and fluid that in combination provide a pancreatic secretion that accomplishes the digestive functions of the gland. Key cellular participants, the acinar cell and the duct cell, are responsible for digestive enzyme and fluid secretion, respectively, of the exocrine pancreas. This chapter describes the neurohumoral pathways that mediate the pancreatic response to a meal as well as details of the cellular mechanisms that are necessary for the organ responses, including protein synthesis and transport and ion transports, and the regulation of these responses by intracellular signaling systems. Examples of pancreatic diseases resulting from dysfunction in cellular mechanisms provide emphasis of the importance of the normal physiologic mechanisms.

Nutrition - The answer of the soul May 20 2022 A journey through the human body, the discovery of a fantasy world where the single parts come into harmony with each other and make the most extraordinary musical work ever written before: the symphony of Life. This journey is narrated by Marisa Lapico, author of the book: "Nutrition the response of the soul." The anatomy of the human body and all of its functions, resulting in a 'fascinating adventure that gives voice to every little cell, starting from the brain, through the various organs, to reach the intestine. A fantastic itinerary which, in a simple and fairytale language, leads to the "right" knowledge of the human body and the processes that regulate it

to achieve a single and only goal: the psycho-physical wellness. Through this story, the reader will run through again the same, identical itinerary the food every day performs in our bodies, even before being brought to our mouth. It is easy to understand how the desire to eat comes from a need different from what everyone believes, that is to satisfy the immediate feeling of hunger. Its origins are far deeper and more ancient, related to our inner side. It is our own soul looking for a good "nourishment" to get rid of false models and stereotypes that society imposes in order to find the unity to which it belongs and to which, inevitably, it tends. It is through these pages that the knowledge of the mysterious relationship between the soul and nutrition takes shape. A process that the science is not able to translate yet, with chemical and mathematical formulas, but that nature itself already contains. Have a good trip!

Digestive System & Metabolism Apr 07 2021 The fourth volume of the Wonders of the Human Body series dives deep into why our bodies need energy and how we get it. As with all our explorations into the complexity of the human body, when you see the incredible design of the digestive system, you ultimately have to ask yourself, "Can this all possibly be an accident? Something that happened by chance?" The answer is a resounding, "No!" We are not the product of evolution. We are not animals. We are a special creation. In Digestive System & Metabolism, you will learn about: The digestive system—including the teeth and tongue, the mouth and esophagus, the stomach and intestines, the liver, the gallbladder, and the pancreas Our metabolism—a complex system created by God to transform food into fuel for our energy God our Designer thought of everything, even the problems that would occur in a sin-cursed world. We are indeed wonderfully made. Prepare to be amazed!

EAT & LIVE: The Power of Good Food Combinations Feb 23 2020 If ever there is one universal language, it would definitely be food. As the years go by, we try to understand and reconcile ourselves with the power of food over our lives. They could make us young or old, fat or slim, health or weak. Because of this, a lot of studies and discoveries were made on the topic of food. As well look at us in the mirror, most of us would almost immediately notice those lines in our faces. Suddenly we all wonder if we are too old or the environment around us is simply moving time so fast. We wonder what could be done. When we got up and stepped on that scale, we are shocked to see that line hit past the average weight. We panic as we think that we are getting fat and would mean getting slow. Mentally we relate our weight to our heavy bodies and low energy. We almost immediately sign up for that gym class. We are extremely conscious of what we look that we tend to forgot that sometimes the answer could be that simple. In our society today, we are bombarded with pollutions and fast food. These two have a tremendous effect on how we eat and look. Fast food centres offer unhealthy food that often times contribute a lot of problems. Lots of studies and experiments are being done to answer our cry for help. We want a diet that is effective. A diet that could boost our energy levels, make us feel young, look young, affordable and sustainable. One interesting and very realistic discovery is "food combining". Correctly combining foods makes all the difference in the world to proper digestion, cholesterol and metabolism. Without complete digestion, the nutrients in even the most wholesome food cannot be fully extracted and assimilated by the body. Before we could even say or open our mouth about food combining, we must first be equipped with the basic knowledge about food, its classifications and digestion. We cannot disregard these as they are the fundamental stones of which this was based. Thus in this book we are going to fully explore the concept of food combining.
