*Technology Commercialization* Aug 01 2020 This title examines both general research and development commercialization and targeted new product innovation. New product development is a major occupation of the technical sector of the global economy and is viewed in many ways as a means of economic stability for a business, an industry, and a country. The heart of the book is a detailing of the analytical methods - with special, but not exclusive emphasis on DEA methods - for evaluating and ranking the most promising R & D and technical innovation being developed. The sponsors of the research and development may involve universities, countries, industries, and corporations - all of these sources are covered in the book. In addition, the trade-off of environmental problems vis-a-vis new product development is discussed in a section of the book.

*The Global Governance of Precarity* Jan 06 2021 'Standard' employment relationships, with permanent contracts, regular hours, and decent pay, are under assault. Precarious work and unemployment are increasingly common, and concern is also growing about the expansion of informal work and the rise of 'modern slavery'. However, precarity and violence are in fact longstanding features of work for most of the world's population. Lamenting the 'loss' of secure, stable jobs often reflects a strikingly Eurocentric and historically myopic perspective. This book argues that standard employment relations have always co-existed with a plethora of different labour regimes. Highlighting the importance of the governance of irregular forms of labour the author draws together empirical, historical analyses of International Labour Organisation (ILO) policy towards forced labour, unemployment, and social protection for informal workers in sub-Saharan Africa. Archival research, extensive documentary research and interviews with key ILO staff are utilised to explore the critical role the organization's activities have often played in the development of mechanisms for governing irregular labour. Addressing the increasingly widespread and pressing practical debates about the politics of precarious labour in the world economy this book speaks to key debates in several disciplines, especially IPE, global governance, and labour studies. It will also be of interest to scholars working in development studies and critical political economy.
