The Spatial and Economic Transformation of Mountain Regions Oct 25 2022 Mountain regions are subject to a unique set of economic pressures: they act as collective enterprises which have to valorize rare resources, such as spectacular landscapes. While primarily rural in nature, they often border large cities, and the development of industries such as hydroelectric power and the rapid development of tourism can bring about sweeping socio-economic change and vast demographic alterations. The Spatial and Economic Transformation of Mountain Regions describes the socio-economic changes and spatial impacts of the last four decades, with the transformation of mountain areas held up as an example. Much of the real-world context draws on the Alps, spanning as they do the significant economies of France, Italy, Germany,

Switzerland, and Austria. Chapters address academic discourse on regional development in these mountain areas and suggest alternative approaches to the liberal-productivist societal model. This book will be essential reading for professionals, institutions, and NGOs searching for counter-models to the existing marketing approaches for peripheral areas. It will also be of interest to students of regional development, economic geography, environmental studies, and industrial economics.

Land Mosaics Aug 11 2021 An analysis and synthesis of the ecology of heterogeneous land areas.

Comptes rendus du Congrès international de géographie, Amsterdam, 1938 ... Dec 15 2021

Environment and Ecology in the Mediterranean Region Jun 28 2020 The Mediterranean Basin with its mountainous shores, high biodiversity and spectacular scenery is located at the intersection of Africa and Eurasia. Through the 8000 years of human development in this area, there have been tremendous changes in its history and biogeography. Approximately 300 million people live here today. Although the evergreen maquis, vineyards, olive plantations and natural woodlands cover the lands all over the basin, it is facing severe destruction of habitats due to deforestation, intensive grazing, fires, and in particular, a severe coastal degradation due to infrastructure development, which is changing the landscape. Both the historical heritage and geography of the land is facing a great threat due to urbanisation and fragmentation. Time has come for its inhabitants to weigh their impact on its ecogeography in order to save the biodiversity as well as the history of the basin. This book synthesises the knowledge from different disciplines so as to increase awareness among the humans in the basin.

Envisioning Landscapes, Making Worlds Jun 16 2019 The past decade has witnessed a remarkable resurgence in the intellectual interplay between geography and the humanities in both academic and public circles. The metaphors and concepts of

geography now permeate literature, philosophy and the arts. Concepts such as space, place, landscape, mapping and territory have become pervasive as conceptual frameworks and core metaphors in recent publications by humanities scholars and well-known writers. *Envisioning Landscapes, Making Worlds* contains over twenty-five contributions from leading scholars who have engaged this vital intellectual project from various perspectives, both inside and outside of the field of geography. The book is divided into four sections representing different modes of examining the depth and complexity of human meaning invested in maps, attached to landscapes, and embedded in the spaces and places of modern life. The topics covered range widely and include interpretations of space, place, and landscape in literature and the visual arts, philosophical reflections on geographical knowledge, cultural imagination in scientific exploration and travel accounts, and expanded geographical understanding through digital and participatory methodologies. The clashing and blending of cultures caused by globalization and the new technologies that profoundly alter human environmental experience suggest new geographical narratives and representations that are explored here by a multidisciplinary group of authors. This book is essential reading for students, scholars, and interested general readers seeking to understand the new synergies and creative interplay emerging from this broad intellectual engagement with meaning and geographic experience.

Regional Landscapes of the US and Canada Feb 17 2022

Extensively praised, *Regional Landscapes of the US and Canada*, 8th Edition is known for providing general readers with an excellent introduction to major geographic concepts and fundamental themes. The new eighth edition builds on this proven success, presenting updated and revised material. Anyone interested in the geography of Canada and the US will find this a valuable, accessible resource.

Remote Sensing for Landscape Ecology Feb 23 2020 Landscape ecology is a rapidly growing science of quantifying the ways in which ecosystems interact - of establishing a link between activities in one region and repercussions in another region. Remote sensing is a fast, inexpensive tool for conducting the landscape inventories that are essential to this branch of science. However, anyone who has conducted studies in the field has already found that traditional landscape ecology metrics are not always reliable with remote images. *Landscape Ecology: New Metric Indicators for Monitoring, Modeling, and Assessment of Ecosystems with Remote Sensing* presents a new set of metrics that allows remotely sensed data to be used effectively in landscape ecology. This groundbreaking new work is the first to present new metrics for remote sensing of landscapes and demonstrate how they can be used to yield more accurate analyses for GIS studies. The new metrics expand the capabilities of GIS, reduce interference and incorrect readings, help ecologists better understand ecosystem relationships, and reduce study costs. This set of metrics should be adopted by the EPA and will be the standard measure for future landscape analysis. This authoritative guide assesses the current state of the field and how remote sensing and landscape metrics have been used to date. It also explains how some of the traditional metrics were developed and how they can fail in landscape studies. Once this background has been established, the new metrics are introduced and their benefits and uses explained. The information in this book has previously been available only in scattered journal articles; this is the first single source for complete background information and instructions on using the new metrics.

J.W.R. Whitehand and the Historico-geographical Approach to Urban Morphology Jul 10 2021 Over recent decades, the historico-geographical approach to urban morphology has been prominent in the debate on the physical form of our cities and on the agents and processes shaping that form over time. With

origins in the work of the geographer M.R.G. Conzen, this approach has been systematically developed by researchers in different parts of the world since the 1960s. This book argues that J.W.R. Whitehand structured an innovative and comprehensive school of urban morphological thought grounded in the invaluable basis provided by Conzen. It identifies the development of several dimensions of the concepts of “fringe belt” and “morphological region” and the systematic exploration of the themes of “agents of change,” “comparative studies” and “research and practice” as key contributions by Whitehand to this school of thought. The book presents contributions from leading international experts in the field addressing these major issues.

Landscape Facets Jul 22 2022 The European Landscape Convention was adopted under the auspices of the Council of Europe with the aim of promoting the protection, management and planning of European landscape and organising European co-operation in this area. It is the first international treaty covering all aspects of landscape. It applies to the entire territory of the contracting parties and covers natural, rural, urban and peri-urban areas. It concerns landscapes that might be considered outstanding, commonplace or deteriorated. The convention represents an important contribution to achieving the Council of Europe's objectives, namely to promote democracy, human rights and the rule of law, as well as to seek common solutions to the

main problems facing European society. By taking into account landscape, culture and nature, the Council of Europe seeks to protect the quality of life and well-being of Europeans in a sustainable development perspective.

Landscape Analysis Nov 14 2021 A key aspect of town planning, landscape planning and landscape architecture is to identify and then use the distinctive features and characteristics of space, place and landscape to achieve environmental quality. Landscape Analysis provides an introduction to the field both in theory and in practice. A wide range of methods and techniques for landscape analysis is illustrated by urban and rural examples from many countries. Analysing landscapes within a planning context requires both skill and insights. Drawing upon numerous concrete examples, together with an examination of some theoretical concepts, this book guides the reader through a wide range of different approaches and techniques of landscape analysis that may be applied at different scales, from elementary site analysis to historical and regional studies. This is an essential book for students and graduate practitioners working in landscape architecture, planning and architecture.

definite companion to all those interested in contemporary Europe." - Journal of Contemporary European Studies Europe is one of the world's oldest civilizations. But what does it mean to be European today? What place does Europe have in global affairs? How should we analyze its key institutions, system of governance and broader cultural, social and political dynamics? This exhaustive and timely handbook: Explores the transformations that characterize contemporary Europe Investigates how we can best study Europe Consolidates European studies and provides a platform for future study Increases the profile of European studies. The Handbook promotes the increasing diversity of perspectives employed in the study of contemporary Europe and EU integration and is situated within the context of Europe's transformations. It offers balanced coverage of political, social, economic, cultural and institutional dimensions of Europe, and includes chapters by leading authorities including Ulrich Beck, Craigh Calhoun, Donatella della Porta, Claus Offe, Anssi Paasi, Ben Rosamond, Gurminder Bhambra and Charles Tilly. Multidisciplinary in organization, inclusive in coverage and cutting-edge in scope, The SAGE Handbook of European Studies is a landmark resource for anyone interested in Europe.

Regions and Designed Landscapes in Georgian England Jun 21 2022 Garden design evolved hugely during the Georgian period - as symbols of wealth and stature, the landed aristocracy had been using gardens for decades. Yet during the eighteenth century, society began to homogenise, and the urban elite also started demanding landscapes that would reflect their positions. The gardens of the aristocracy and the gentry were different in appearance, use and meaning, despite broad similarities in form. Underlying this was the importance of place, of the landscape itself and its raw material. Contemporaries often referred to the need to consult the 'genius of the place' when creating a new designed landscape, as the place where the garden was located was critical in determining its appearance. Genius loci - soil type,

topography, water supply - all influenced landscape design in this period. The approach taken in this book blends landscape and garden history to make new insights into landscape and design in the eighteenth century. Spooner's own research presents little-known sites alongside those which are more well known, and explores the complexity of the story of landscape design in the Georgian period which is usually oversimplified and reduced to the story of a few 'great men'.

Metropolitan Landscapes Aug 19 2019 This edited volume covers many aspects of the Metropolitan Landscapes. Solutions are needed to meet the demand of the citizens of a renewed metropolitan region landscape. It opens up discussions about possible toolkits for strategic actions based on understanding the territory from geographical, urban, architectural, economic, environmental, and public policy perspectives. This book intends to promote the Metropolitan dwelling quality, ensuring human well-being proposing a discussion on the resilient articulation of the interface space among the city's infrastructure, agriculture, and nature. This book results from the Symposium: Metropolitan Landscapes that MSLab of the Politecnico di Milano and ETSA (Sevilla) organized at the IALE 2019 Conference (Milan, July 2019) to manage radical territory transformation with a strategic vision. The widespread growth of urban areas indicates the importance of building resilient sustainable cities capable of minimizing climate-change impact production. The Symposium aimed to discuss the Urban Metabolism approach considering the combination of Landscapes set in a single Metropolitan Ecosystem. Accordingly, new design strategies of transformation, replacement or maintenance can compose Urban-Rural Linkage patterns and a decalage of different landscape contexts. Ecological interest in environmental sustainability, compatibility, and resilience is not tied exclusively to the balance between production and energy consumption. Thus, it is the integration over time and at several scales of the urban and rural landscapes

Adaptations of the Metropolitan Landscape in Delta

Regions Apr 19 2022 Adaptations of the Metropolitan Landscape in Delta Regions is about environmental quality and the long term livability of urban areas. In decades to come, climate change will affect cities everywhere, but nowhere have the effects of climate change already been felt as strongly as in low-lying coastal cities, cities located in large river deltas and near tidal estuaries. This book reflects on the contribution that spatial planning and urban design can make to a complex discussion about how city form and landscapes will need to adapt within metropolitan areas. The

book's focus is on the urban form of three delta regions: the Pearl River Delta in Southern China; the Rhine, Maas, and Scheldt Delta in the Netherlands; and the San Francisco Bay Area in Northern California. The three regions differ greatly, but despite their different political systems, history, culture and locations in three different climate zones, all three regions will be forced to respond to similar issues that will trigger transformations and adaptations to their urban form. Richly illustrated in color with detailed diagrams, models, photographs and sketches, the book is written for students, scholars and practitioners of environmental planning, and designers who need to respond to the future form of cities in light of climate change. For the professions shaping the physical world of cities and regions, the challenge is not only one of designing physical geometries but of social consequences.

Changing Landscapes of Singapore Apr 26 2020 Changing Landscapes of Singapore illuminates both the social and the physical terrains of modern Singapore. Geographers use the term landscape to refer to visible surfaces and to the spatial dimension of social relations. Landscapes arise from particular historical circumstances, and in turn help shape social arrangements and possible courses of future development. The authors describe how the settings inhabited by various social groups in Singapore affect life experiences, and explore the impact of broader regional and international forces on Singapore. Written for non-specialists, the volume reflects fresh perspectives from the scholarship of Singaporean academics. Their work is sensitive to historical and geographical trends in the region, and also engages with broader theoretical themes.

The Renewable Energy Landscape Aug 31 2020 Winner of the 2017 EDRA Great Places Award (Research Category) Winner of the 2017 VT ASLA Chapter Award of Excellence (Communications Category) The Renewable Energy Landscape is a definitive guide to understanding, assessing, avoiding, and minimizing scenic impacts as we transition to a more renewable energy future. focuses attention, for the first time, on the unique challenges solar, wind, and geothermal energy will create for landscape protection, planning, design, and management. Topics addressed include: Policies aimed at managing scenic impacts from renewable energy development and their social acceptance within North America, Europe and Australia Visual characteristics of energy facilities, including the design and planning techniques for avoiding or mitigating impacts or improving visual fit Methods of assessing visual impacts or energy projects and the best practices for creating and using visual simulations Policy recommendations for political and regulatory bodies. A comprehensive and practical book, *The Renewable Energy Landscape* is an essential resource for those engaged in planning, designing, or regulating the impacts of these new, critical energy sources, as well as a resource for communities that may be facing the prospect of development in their local landscape.

Wetlands of the World I: Inventory, Ecology and

Management Oct 21 2019 The impetus for this volume was the 2nd International Wetlands Conference which was held in June, 1984 at Trebon, Czechoslovakia. An overview of the worlds wetlands was one of the themes of the conference and it was decided that a useful follow-up would be a publication on the same topic. The initial goal was to cover as many of the worlds wetlands as possible in one volume and to have an emphasis on wetland ecology, biota, classification, and management.

Individuals who made presentations at the Trebon conference were asked to prepare chapters and the editors also solicited other contributions. For a variety of reasons, the initial goal has been difficult to reach, especially coverage of the entire globe, and it has been necessary to publish the contributions in more than one volume. Volume 1 represents the completion of the first phase of the project and it covers most of the Western Hemisphere, Australia, most of Africa, the Indian subcontinent, the Mediterranean region, and Papua New Guinea. Volume 2 will

contain chapters on Western Europe, Northern Europe, Central Europe, most of northern and It is our hope that Volume western Asia, the Middle East, and Indonesia. 2 will appear in the near future and, if possible, a third volume will be published if authors can be secured to cover areas such as the Far East, other parts of the Indo-Pacific region, and New Zealand.

Landscape Evolution in the United States Nov 02 2020

Landscape Evolution in the United States is an accessible text that balances interdisciplinary theory and application within the physical geography, geology, geomorphology, and climatology of the United States. Landscape evolution refers to the changing terrain of any given area of the Earth's crust over time. Common causes of evolution (or geomorphology—land morphing into a different size or shape over time) are glacial erosion and deposition, volcanism, earthquakes, tsunamis, tornadoes, sediment transport into rivers, landslides, climate change, and other surface processes. The book is divided into three main parts covering landscape components and how they are affected by climactic, tectonic and ocean systems; varying structural provinces including the Cascadia Volcanic Arc and California Transpressional System; and the formation and collapse of mountain systems. The vast diversity of terrain and landscapes across the United States makes this an ideal tool for geoscientists worldwide who are researching the country's geological evolution over the past several billion years. Presents the complexities of physical geography, geology, geomorphology, and climatology of the United States through an interdisciplinary, highly accessible approach Offers more than 250 full-color figures, maps and photographs that capture the systematic interaction of land, rock, rivers, glaciers, global wind patterns and climate Provides a thorough assessment of the logic, rationale, and tools required to understand how to interpret landscape and the geological history of the Earth Features exercises that conclude each chapter, aiding in the retention of key concepts

Landscapes and Landforms of Eastern Canada Dec 23 2019

This critical book focuses on the geomorphological landscapes of eastern Canada and provides a companion volume to “Landscapes and Landforms of Western Canada” (2017). There are a number of unique characteristics of eastern Canada’s landscapes, notably its magnificent coastlines, the extraordinary variety and extent of wetlands, the huge Great Lakes-St. Lawrence basin, the high incidence of meteorite craters, the spectacular Niagara Falls, urban karst in Montreal and Ottawa, youthful, glaciated karst in Ontario, Newfoundland, Quebec and Nova Scotia, the ubiquitous permafrost terrain of Nunavut, Labrador and northern Quebec and the magnificent arctic fjords and glaciers. Looking at coastlines, the tidal extremes of the Bay of Fundy are world renowned; the structural complexity of the island of Newfoundland is less well known, but produces an astounding variety of coastlines in close succession; the arctic fjordlands of Baffin and Ellesmere islands and the extravagant raised beaches of Hudson Bay bear comparison with the classic fjords of Norway and the Baltic Sea raised beaches. As for wetlands, there are distinctive Arctic, Subarctic, Boreal, Eastern Temperate and Atlantic wetlands, and their extent is second only to those of Russia. In the Hudson and James Bay regions, between 75-100% of the terrestrial surface is comprised of wetlands. One of North America’s largest river basins, the Great Lakes-St. Lawrence basin, has its source in Minnesota, straddles the USA-Canada border and debouches into Quebec as the St. Lawrence River and evolves through its estuary into the Gulf of St. Lawrence, a journey of almost 5,000 km. As far as meteorite craters are concerned, 10% of the world’s total are located in eastern Canada, including some of the largest and most complex landforms. They are preserved preferentially in the ancient Shield terrain of Quebec. Finally, the three million km² of permafrost controlled relief in eastern Canada serves as a reminder of the vulnerability of eastern Canada’s landscapes to climate change.

Effects of warming are expressed through thawing of the permafrost, disruption of transportation corridors and urban construction problems, ever-present geomorphic hazards.

Roadmap to the Regents Aug 23 2022 If Students Need to Know It, It's in This Book This book develops the Earth science skills of high school students. It builds skills that will help them succeed in school and on the New York Regents Exams. Why The Princeton Review? We have more than twenty years of experience helping students master the skills needed to excel on standardized tests. Each year we help more than 2 million students score higher and earn better grades. We Know the New York Regents Exams Our experts at The Princeton Review have analyzed the New York Regents Exams, and this book provides the most up-to-date, thoroughly researched practice possible. We break down the test into individual skills to familiarize students with the test's structure, while increasing their overall skill level. We Get Results We know what it takes to succeed in the classroom and on tests. This book includes strategies that are proven to improve student performance. We provide content groupings of questions based on New York standards and objectives detailed lessons, complete with skill-specific activities three complete practice New York Regents Exams in Physical Setting/Earth Science

The Cultural Landscape & Heritage Paradox Jul 30 2020 The basic problem is to what extent we can know past and mainly invisible landscapes, and how we can use this still hidden knowledge for actual sustainable management of landscape's cultural and historical values. It has also been acknowledged that heritage management is increasingly about 'the management of future change rather than simply protection'. This presents us with a paradox: to preserve our historic environment, we have to collaborate with those who wish to transform it and, in order to apply our expert knowledge, we have to make it suitable for policy and society. The answer presented by the Protection and

Development of the Dutch Archaeological-Historical Landscape programme (pdl/bbo) is an integrative landscape approach which applies inter- and transdisciplinarity, establishing links between archaeological-historical heritage and planning, and between research and policy.

The Historical Geography of Croatia Apr 07 2021 This monograph gives a comprehensive but in-depth analysis of the territorial development of Croatia and historical processes of significant spatial impact. It covers the millennial time span - from prehistory till the present, through relevant periods, e.g., prehistory, antiquity, Middle Ages, period of Ottoman progression and retreat, Post-Ottoman period of development of the Central European railway network, the period of South Slavic political associations (old and new Yugoslavia), and the post-Yugoslav period of independent Croatia. The book is highly illustrated with maps and figures. It is written by scholars from the region, based on the original research and the vast body of literature. It is one of the only books in English that interprets the overall development of the territory and cultural landscape of Croatia. Its scientific but comprehensive approach makes it of use to scholars, students and anyone interested in historical and geographical processes and features of Croatia and the Balkan region.

Planning in Eastern Europe (Routledge Revivals) Oct 13 2021 Planning is particularly important in Eastern Europe since most spatial change and economic planning are the products of centralised decision-making, which in turn is the product of a systematic socio-political ideology. Planning is therefore an important key to understanding society, economy and spatial change in Eastern Europe. This book, which was first published in 1987, provides a comprehensive overview of planning in Eastern Europe. Each chapter discusses the nature of planning in the country in question and the changes which have taken place since 1945, and examines regional, economic, land-use, environmental protection and urban design policies and their achievements in the post- 1945 period. Introductory chapters discuss the physical, economic and political background of the area and a conclusion considers overall successes and failures and discusses likely future developments. This book is ideal for students of geography.

Iroquois and Tennessee Gas Transmission Pipeline Project, Construction and Operation Nov 21 2019

Theories of Endogenous Regional Growth Dec 03 2020

During the last two decades a new growth theory has emerged - often labelled "endogenous economic growth". The contributions in the book develop these advances into a theoretical framework for endogenous regional economic growth and explain the implications for regional economic policies in the perspective of the new century. Endogenous growth models can reflect increasing returns and hence refer more adequately to empirical observations than earlier models, and the models become policy relevant, because in endogenous growth models policy matters. Such policies comprise efforts to stimulate the growth of knowledge intensity of the labour supply and knowledge production in the form of R&D.

Spatializing the History of Ecology Jul 18 2019 Throughout its history, the discipline of ecology has always been profoundly entangled with the history of space and place. On the one hand, ecology is a field science that has thrived on the study of concrete spatial entities, such as islands, forests or rivers. These spaces are the workplaces in which ecological phenomena are identified, observed and experimented on. They provide both epistemic opportunities and constraints that structure the agenda and the analytical sensibilities of ecological researchers. On the other hand, ecological knowledge and practices have become important resources through which spaces and places are classified, delineated, explained, experienced and managed. The impact of these activities reaches far beyond the realms of the ecological discipline. Many ecological concepts such as "biotopes," "ecosystems" and "the biosphere" have become entities that widely resonate in public life and policy making. This book explores the mutual entanglement between space and knowledge-making in the history of ecology. Its first goal is to explore to which extent a spatial perspective can shed new light on the history of ecological science. Second, it uses ecology as a critical site to gain broader insights into the history of the environment in the nineteenth and twentieth centuries. Via a series of case studies - discussing topics that range from ecological field stations in the early-twentieth century Caribbean over wisent breeding in Nazi Germany to computer modelling in North American deserts - the book offers a tour through the changing landscapes of modern ecology.

New Zealand Landscape Sep 24 2022 New Zealand Landscape: Behind the Scene tells the story of New Zealand through the subject of geomorphology, a branch of earth science at the interface of geology and geography. Geomorphology is informally described as the 'science of scenery', and as with every science, ideas evolve as the research frontier advances. Users will find an early 21st century interpretation of the New Zealand landscape, an interpretation that rests on, and draws from, a rich foundation of ideas bequeathed by predecessors who have had the privilege of exploring, researching, and enjoying this corner of the Pacific. Tells a geological and geographical story with questions that are addressed and answered in the course of the book Written in an accessible style for both researchers and students Features full-color photos of the beautiful New Zealand landscape

German Annual of Spatial Research and Policy 2010

May 28 2020 Resilience is increasingly becoming a catchword in current discussions about urban and regional development. While there has been a strong research focus on sustainability, there is a lack of understanding of the processes and factors that make cities

and regions more vulnerable and others more resilient, for example, when dealing with climate change, demographic decline and ageing, as well as economic crises. The German Annual of Spatial Research and Policy 2010 sheds some light on this by discussing examples of how actors deal with change. On the one hand, concepts are described and analysed which are oriented towards increasing urban regional resilience, for example regarding energy consumption, climate change, and urban decline. Moreover, institutional aspects are discussed. On the other hand, barriers for using the concept of resilience in planning are described and suggestions are made about how to deal with these barriers in strategic planning.

Let's Review Regents: Earth Science--Physical Setting Revised Edition Mar 18 2022 Barron's Let's Review Regents: Earth

Science--Physical Setting gives students the step-by-step review and practice they need to prepare for the Regents exam. This updated edition is an ideal companion to high school textbooks and covers all Physical Setting/Earth Science topics prescribed by the New York State Board of Regents. This book features:

Comprehensive topic review covering fundamentals such as astronomy, geology, and meteorology Reference Tables for Physical Setting/Earth Science More than 1,100 practice questions with answers covering all exam topics drawn from recent Regents exams One recent full-length Regents exam with answers Looking for additional practice and review? Check out Barron's Regents Earth Science--Physical Setting Power Pack two-volume set, which includes Regents Exams and Answers: Earth Science--Physical Setting in addition to Let's Review Regents: Earth Science--Physical Setting.
