Mapping Archaeological Landscapes from Space Feb 07 2021 Mapping Archaeological

Landscapes from Space offers a concise overview of air and spaceborne imagery and related geospatial technologies tailored to the

needs of archaeologists. Leading experts including scientists involved in NASA's Space Archaeology program provide technical

introductions to five sections: 1) Historic Air and Spaceborne Imagery 2) Multispectral and Hyperspectral Imagery 3) Synthetic Aperture Radar 4) Lidar 5) Archaeological Site Detection and Modeling Each of these five sections includes two or more case study applications that have enriched understanding of archaeological landscapes in regions including the Near East, East Asia, Europe, Meso- and North America. Targeted to the needs of researchers and heritage managers as well as graduate and advanced undergraduate students, this volume conveys a basic technological sense of what is currently possible and, it is hoped, will inspire new pioneering applications. Particular attention is paid to the tandem goals of research (understanding) and archaeological heritage management (preserving) the ancient past. The technologies and applications presented can be used to characterize environments, detect archaeological sites, model sites and settlement patterns and, more generally, reveal the dialectic landscape-scale dynamics among ancient peoples and their social and environmental surroundings. In light of contemporary economic development and resultant damage to and destruction of archaeological sites and landscapes, applications of air and spaceborne technologies in archaeology are of wide utility and promoting understanding of them is a particularly appropriate goal at the 40th anniversary of the World Heritage Convention.

Abnormal Psychology Oct 23 2019 In *Abnormal Psychology*, best-selling author William J. Ray brings together current perspectives concerning the manner in which the human mind, behavior, and experience can be understood. In addition to the traditional psychological literature, this book draws from work in the cognitive and affective neurosciences, epidemiology, ethology, and genetics. Ray focuses on unifying and integrating the biopsychosocial understandings of human behavior within a broader consideration of human culture and language as it applies to abnormal psychology. With coverage of DSM-5, ICD-11, and RDoC, the fully revised Third Edition puts even greater emphasis on the range of human experiences and medical comorbidities and includes additional references to representations of mental health in popular culture to connect readers with familiar examples. This title is accompanied by a complete teaching and learning package.

Case Studies in Abnormal Psychology Oct 15 2021 The casebook provides 17 additional case histories based on the authors' clinical experiences, each going beyond DSM-IV diagnosis to describe the individual's history and symptoms, a theoretical discussion of treatment, a specific treatment plan, and the actual treatment conducted. The casebook also provides 3 cases without diagnosis or

treatment, so students can identify disorders and suggest appropriate therapies.

Case Studies in Abnormal Psychology Oct 03 2020 *Case Studies in Abnormal Psychology* presents a broad range of cases drawn from the clinical experience of authors Kenneth N. Levy, Kristen M. Kelly, and William J. Ray to take readers beyond theory into real-life situations. The authors take a holistic approach by including multiple perspectives and considerations, apart from those of just the patient. Each chapter follows a consistent format: Presenting Problems and Client Description; Diagnosis and Case Formulation; Course of Treatment; Outcome and Prognosis/Treatment Follow-up; and Discussion Questions. Providing empirically supported treatments and long-term follow-up in many case studies gives students a deeper understanding of each psychopathology and the effects of treatment over time.

Advanced Electronic Circuit Design Jun 18 2019 Description: Building on Fundamentals of Electronics Circuit Design, David and Donald Comer's new text, Advanced Electronic Circuit Design, extends their highly focused, applied approach into the second and third semesters of the electronic circuit design sequence. This new text covers more advanced topics such as oscillators, power stages, digital/analog converters, and communications circuits such as mixers, and detectors. The text also includes technologies that are emerging. Advanced Electronic Circuit Design focuses exclusively on MOSFET and BJT circuits, allowing students to explore the fundamental methods of electronic circuit analysis and design in greater depth. Each type of circuit is first introduced without reference to the type of device used for

implementation. This initial discussion of general principles establishes a firm foundation on which to proceed to circuits using the actual devices. Features: 1. Provides concise coverage of several important electronic circuits that are not covered in a fundamentals textbook. 2. Focuses on MOSFET and BJT circuits, rather than offering exhaustive coverage of a wide range of devices and circuits. 3. Includes an Important Concepts summary at the beginning of each section that direct the reader's attention to these key points. 4. Includes several Practical Considerations sections that relate developed theory to practical circuits. Instructor Supplements: ISBN SUPPLEMENT DESCRIPTION Online Solutions Manual Brief Table of Contents: 1. Introduction 2. Fundamental Power Amplifier Stages 3. Advanced Power Amplification 4. Wideband Amplifiers 5. Narrowband Amplifiers 6. Sinusoidal Oscillators 7. Basic Concepts in Communications 8. Amplitude Modulation Circuits 9. Angle Modulation Circuits 10. Mixed-Signal Interfacing Circuits 11. Basic Concepts in Filter Design 12. Active Synthesis 13. Future Directions *Case Studies in Abnormal Psychology* Mar 20 2022 Fully updated for DSM-5, this exciting revision complements the abnormal psychology course by providing 17 case histories based on the authors' clinical experiences. Each case study goes beyond DSM-5 diagnosis to describe the individual's history and symptoms, a theoretical discussion of treatment, a specific

treatment plan, the actual treatment conducted, and assessment questions for students. The casebook also provides three "You Decide" cases -- written without diagnosis or treatment, so students can identify disorders and suggest appropriate therapies. This new edition adds assessment questions to the end of each case and also features three brand new cases: hoarding, somatic symptom disorder, and gender dysphoria.

Pharmacokinetic Optimization in Drug Research Dec 05 2020 In this age of combinatorial chemistry and high-throughput technologies, bioactive compounds called hits are discovered by the thousands. However, the road that leads from hits to lead compounds and then to pharmacokinetically optimized clinical and drug candidates is very long indeed. As a result, the screening, design, and optimization of pharmacokinetic properties has

become the bottleneck and a major challenge in drug research. To shorten the time-consuming development and high rate of attrition of active compounds ultimately doomed by hidden pharmacokinetic defects, drug researchers are coming to incorporate structure-permeation, structure-distribution, structure-metabolism, and structure-toxicity relations into drug-design strategies. To this end, powerful biological, physicochemical, and computational approaches are being developed whose objectives are to increase the clinical relevance of drug design, and to eliminate as soon as possible compounds with unfavorable physicochemical properties and pharmacokinetic profiles. Toxicological issues are also of utmost importance in this paradigm. There was, hence, an urgent need for a book covering this field in an authoritative, didactic, comprehensive, factual, and conceptual manner. In this work of unique breadth and depth, international authorities and practicing experts from academia and industry present the most modern biological, physicochemical, and computational strategies to optimize gastrointestinal absorption, protein binding and distribution, brain permeation, and metabolic profile. The biological strategies emphasized in the book include cell cultures and high-throughput screens. The physicochemical strategies focus on the determination and interpretation of solubility, lipophilicity, and related molecular properties as factors and predictors of pharmacokinetic behavior.

Particular attention is paid to the lipophilicity profiles of ionized compounds, to lipophilicity measurements in anisotropic media (liposomes/water, IAM columns), and to permeability across artificial membranes. Computational strategies comprise virtual screening, molecular modelling, lipophilicity, and H-bonding fields and their importance for structure-disposition relations. This book is both about theoretical and technological breakthroughs. Thus, molecular properties are contemplated from a dual perspective, namely a) their interpretation in biological and/or physicochemical terms, and b) their value in screening, lead optimization, and drug-candidate selection. In addition to its 33 chapters, the book includes a CD-ROM containing the invited lectures, oral

communications and posters (in full version) presented at the Second LogP Symposium, 'Lipophilicity in Drug Disposition—Practical and Computational Approaches to Molecular Properties Related to Drug Permeation, Disposition and Metabolism', held at the University of Lausanne in March 2000.
