Plasma Surface Modification of Polymers Apr 01 2020 This book is a collection of invited papers (previously published in special issues of the Journal of Adhesion Science and Technology) written by internationally recognized researchers actively working in the field of plasma surface modification. It provides a current, comprehensive overview of the plasma treatment of polymers. In contrast to plasma polymerization, plasma surface modification reactions do not cause thin-film deposition, and can therefore only modify the surface properties of organic substrates. Plasma surface modifications are fast, efficient methods for improving the adhesion properties and other surface characteristics of a variety of polymeric materials. The focus of this volume is on adhesion phenomena, surface properties and the surface characterization of plasma-treated materials. This book opens with a critical review of the plasma surface modification of polymers for improved adhesion. The remainder of the papers are divided into two sections, one dealing with the characterization of plasma-treated surfaces and the second concerned with various practical applications of plasma-treated surfaces

Laser Processing of Engineering Materials Feb 09 2021 The complete guide to understanding and using lasers in material processing! Lasers are now an integral part of modern society, providing extraordinary opportunities for innovation in an ever-widening range of material processing and manufacturing applications. The study of laser material processing is a core element of many materials and manufacturing courses at undergraduate and postgraduate level. As a consequence, there is now a vast amount of research on the theory and application of lasers to be absorbed by students, industrial researchers, practising engineers and production managers. Written by an acknowledged expert in the field with over twenty years' experience in laser processing, John Ion distils cutting-edge information and research into a single key text. Essential for anyone studying or working with lasers, Laser Processing of Engineering Materials provides a clear explanation of the underlying principles, including physics, chemistry and materials science, along with a framework of available laser processes and their distinguishing features and variables. This book delivers the knowledge needed to understand and apply lasers to the processing of engineering materials, and is highly recommended as a valuable guide to this revolutionary manufacturing technology. The first single volume text that treats this core engineering subject in a systematic manner Covers the principles, practice and application of lasers in all contemporary industrial processes; packed with examples, materials data and analysis, and modelling techniques

[Service Profit Chain](#) Apr 25 2022 In this pathbreaking book, world-renowned Harvard Business School service firm experts James L. Heskett, W. Earl Sasser, Jr. and Leonard A. Schlesinger reveal that leading companies stay on top by managing the service profit chain. Why are a select few service firms better at what they do -- year in and year out -- than their competitors? For most senior managers, the profusion of anecdotal "service excellence" books fails to address this key question. Based on five years of painstaking research, the authors show how managers at American Express, Southwest Airlines, Banc One, Waste Management, USAA, MBNA, Intuit, British Airways, Taco Bell, Fairfield Inns, Ritz-Carlton Hotel, and the Merry Maids subsidiary of ServiceMaster employ a quantifiable set of relationships that directly links profit and growth to not only customer loyalty and satisfaction, but to employee loyalty, satisfaction, and productivity. The strongest relationships the authors

discovered are those between (1) profit and customer loyalty; (2) employee loyalty and customer loyalty; and (3) employee satisfaction and customer satisfaction. Moreover, these relationships are mutually reinforcing; that is, satisfied customers contribute to employee satisfaction and vice versa. Here, finally, is the foundation for a powerful strategic service vision, a model on which any manager can build more focused operations and marketing capabilities. For example, the authors demonstrate how, in Banc One's operating divisions, a direct relationship between customer loyalty measured by the "depth" of a relationship, the number of banking services a customer utilizes, and profitability led the bank to encourage existing customers to further extend the bank services they use. Taco Bell has found that their stores in the top quadrant of customer satisfaction ratings outperform their other stores on all measures. At American Express Travel Services, offices that ticket quickly and accurately are more profitable than those which don't. With hundreds of examples like these, the authors show how to manage the customer-employee "satisfaction mirror" and the customer value equation to achieve a "customer's eye view" of goods and services. They describe how companies in any service industry can (1) measure service profit chain relationships across operating units; (2) communicate the resulting self-appraisal; (3) develop a "balanced scorecard" of performance; (4) develop a recognition and rewards system tied to established measures; (5) communicate results company-wide; (6) develop an internal "best practice" information exchange; and (7) improve overall service profit chain performance. What difference can service profit chain management make? A lot. Between 1986 and 1995, the common stock prices of the companies studied by the authors increased 147%, nearly twice as fast as the price of the stocks of their closest competitors. The proven success and high-yielding results from these high-achieving companies will make *The Service Profit Chain* required reading for senior, division, and business unit managers in all service companies, as well as for students of service management.

Reinventing American Health Care Jan 23 2022 The definitive story of American health care today -- its causes, consequences, and confusions. In March 2010, the Affordable Care Act was signed into law. It was the most extensive reform of America's health care system since at least the creation of Medicare in 1965, and maybe ever. The ACA was controversial and highly political, and the law faced legal challenges reaching all the way to the Supreme Court; it even precipitated a government shutdown. It was a signature piece of legislation for President Obama's first term, and also a ball and chain for his second. Ezekiel J. Emanuel, a professor of medical ethics and health policy at the University of Pennsylvania who also served as a special adviser to the White House on health care reform, has written a brilliant diagnostic explanation of why health care in America has become such a divisive social issue, how money and medicine have their own -- quite distinct -- American story, and why reform has bedeviled presidents of the left and right for more than one hundred years. Emanuel also explains exactly how the ACA reforms are reshaping the health care system now. He forecasts the future, identifying six mega trends in health that will determine the market for health care to 2020 and beyond. His predictions are bold, provocative, and uniquely well-informed. Health care -- one of America's largest employment sectors, with an economy the size of the GDP of France -- has never had a more comprehensive or authoritative interpreter.

Customer Visits: Building a Better Market Focus Oct 20 2021 Visits to customers by a cross-functional team of marketers and engineers play an important role in new product development, entry into new markets, and in exploring customer satisfaction and dissatisfaction. The new edition of this widely used professional resource provides step-by-step instructions for making effective use of this market research technique. Using a wealth of specific examples, Edward F. McQuarrie explains how to set feasible objectives and how to select the right number of the right kind of customers to visit. One of the leading experts in the field, McQuarrie demonstrates how to construct a discussion guide and how to devise good questions, and offers practical advice on how to conduct face-to-face interviews. Extensively updated throughout, this third edition includes three new chapters as well as expanded coverage of the analysis of visit data. It also discusses which industries and product categories are most (and least) suitable to the customer visit technique. The author also covers how the customer visit technique compares to other market research techniques such as focus groups.

Modernité en transit - Modernity in Transit Jan 11 2021 En 1979, Jean-Fran ç ois Lyotard a articulé la condition postmoderne, annon ç ant la fin de la modernité. Mais la modernité nous tient encore et se réinvente dans des nouvelles périodisations. Il nous incombe de reprendre la réflexion sur ce paradigme à la fois historique, culturel et social, et ceci, à partir de notre condition de « pu î n é s » de la modernité. Tel est le programme de réflexion de cet ouvrage collectif qui privilégie une approche interdisciplinaire et internationale.

Drawing Futures Dec 30 2019 Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture. Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. Drawing Futures will present a compendium of projects, writings and interviews that critically reassess the act of drawing and where its future may lie. Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name, taking place at The Bartlett School of Architecture, UCL, in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.

Spatial Tessellations Apr 13 2021 "Given a pattern of objects in continuous space, Voronoi diagrams provide a means of naturally partitioning the space into subregions. This is a rapidly expanding topic as these diagrams find application in such areas as spatial data manipulation, modelling spatial structures and spatial processes, pattern analysis and locational optimization. These areas can be found within many different scientific fields, and consequently this increases not only the use of Voronoi diagrams but also the demand for knowledge about them. This is the first book which, dealing exclusively with these diagrams, meets this demand. Material within is synthesized, unified and presented in a structured form. Emphasis of a particular perspective is deliberately avoided in order to provide a comprehensive and balanced treatment of all aspects of Voronoi diagrams. A wide range of applications drawn from over a dozen fields is discussed, enabling this book to serve as an important reference volume on this topic." "This book should appeal equally to those whose interests in Voronoi diagrams are theoretical, practical or both."--BOOK JACKET. Title Summary field provided by Blackwell North America, Inc. Globalization and Time Aug 06 2020 The process of globalization has brought about countless changes in societies, communities, regions and economies across the globe. It has been analyzed from many perspectives as a result and much has been written to muddy the waters of our understanding of this important concept. In going back to the real origins of the global economy, this book demonstrates that understanding this phenomenon as a 'battle against time' will bring a new clarity to the subject. The process of globalization was accompanied by the mastering of 'social time', thereby producing a progressive increase in the speed of business transactions, both in manufacturing and in services. The context is the development of international trade in western societies and the creation of business institutions to drive forward growth. The account takes a 'long view', beginning with early European exploration in the B.C. period, and ending with the establishment of multinational enterprises in the 20th century. Using an impressive range of sources this unique book will be valuable reading for students and academics involved with the study of international business, economic history, business history and politics, among other disciplines.
