Disability as Diversity in Higher Education Sep 21 2019  
Addressing disability not as a form of student impairment—as it is typically perceived at the postsecondary level—but rather as an important dimension of student diversity and identity, this book explores how disability can be more effectively incorporated into college environments. Chapters propose new perspectives, empirical research, and case studies to provide the necessary foundation for understanding the role of disability within campus climate and integrating students with disabilities into academic and social settings. Contextualizing disability through the lens of intersectionality, *Disability as Diversity in Higher Education* illustrates how higher education institutions can use policies and practices to enhance inclusion and student success.

*Intercultural Competence Past, Present and Future* Jan 18 2022  
This book explores the benefits of teaching reflection upon one's own culture to develop intercultural competence and looks into the relationship between the proficiency level of the second language and the target culture. It introduces new debates on the concept of 'critical cultural awareness' in intercultural learning and

teaching, for example the indiscriminate use of terminologies related to the idea of 'intercultural encounters'. Also, it provides insight into the relationship between language and culture using a new tool such as the *Autobiography of Intercultural Encounters through Visual Media*. The presentation of different approaches, tools, barriers, educational and cultural realities, online intercultural exchange projects and concepts such as motivation, attitudes, stereotyping, otherization, and critical cultural awareness makes this book an excellent instrument not only for teachers but also for researchers, policy-makers and private and public institutions that want to explore culture and interculturality and to promote an intercultural competence and global citizenship among its learners / users / clients and / or an interculturally-oriented language education.

Elementary Mathematics Curriculum Materials Sep 14 2021  
The book presents comparative analyses of five elementary mathematics curriculum programs used in the U.S. from three different perspectives: the mathematical emphasis, the pedagogical approaches, and how authors communicate with teachers. These perspectives comprise a framework for examining what curriculum materials are comprised of, what is involved in reading and interpreting them, and how curriculum authors can and do support teachers in this process.

Although the focus of the analysis is 5 programs used at a particular point in time, this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general. Our analysis of the mathematical emphasis considers how the mathematics content is presented in each program, in terms of sequencing, the nature of mathematical tasks (cognitive demand and ongoing practice), and the way representations are used. Our analysis of the pedagogical approach examines explicit and implicit messages about how students should interact with mathematics, one another, the teacher, and the textbook around these mathematical ideas, as well as the role of the teacher. In order to examine how curriculum authors support teachers, we analyze how they communicate with teachers and what they communicate about, including the underlying mathematics, noticing student thinking, and rationale for design elements. The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors.

**Envisioning the Future of Reference: Trends, Reflections, and Innovations** Aug 01 2020 Offering a broad overview of consequential changes in the landscape of reference services, this guide also provides practical guidance on how to meet the new challenges they present. For the past decade, librarians have been lamenting the demise of reference services. Encouraging recent research shows that reference librarians are actually in more demand than ever; however, nearly everything about reference has changed--from technologies, tools, and techniques to models of service. What are these changes, and how can the profession respond to and prepare for shifting priorities and user needs? In this volume, business librarians Diane Zabel and Lauren Reiter bring together a host of experts to answer these timely questions. Topics range from the education and training of professionals to meeting the needs and wants of employers. Covered are trends in chat reference, research consultations, do-it-yourself reference, tracking trends with user populations, assessment, and data-driven decisions about reference services. Grounded in the principle that regardless of the evolutions in service, the user remains at the center of reference, this guide offers readers an exciting look at the future of this important public service. Informs librarians of trends currently affecting the profession and shows how to deal with them

Covers a wide array of topics, from those affecting the education of reference services to assessment of services Provides an in-depth look at new models in reference services
