The Star Diaries Aug 02 2020 @Ijon Tichy, Lem's Candide of the Cosmos, encounters bizarre civilizations and creatures in space that serve to satirize science, the rational mind, theology, and other icons of human pride. Imaginary Magnitude Sep 27 2022 These wickedly authentic introductions to twenty-first-century books preface tomes on teaching English to bacteria, using animated X-rays to create "pornograms," and analyzing computer-generated literature through the science of "bitistics." "Lem, a science fiction Bach, plays in this book a googleplex of variations on his basic themes" (New York Times Book Review).

The Truth and Other Stories Mar 09 2021 Twelve stories by science fiction master Stanislaw Lem, nine of them never before published in English. Of these twelve short stories by science fiction master Stanislaw Lem, only three have previously appeared in English, making this the first "new" book of fiction by Lem since the late 1980s. The stories display the full range of Lem's intense curiosity about scientific ideas as well as his sardonic approach to human nature, presenting as multifarious a collection of mad scientists as any reader could wish for. Many of these stories feature artificial intelligences or artificial life forms, long a Lem preoccupation; some feature quite insane theories of cosmology or evolution. All are thought provoking and scathingly funny. Written from 1956 to 1993, the stories are arranged in chronological order. In the title story, "The Truth," a scientist in an insane asylum theorizes that the sun is alive; "The Journal" appears to be an account by an omnipotent being describing the creation of infinite universes--until, in a classic Lem twist, it turns out to be no such thing; in "An Enigma," beings debate whether offspring can be created without advanced degrees and design templates. Other stories feature a computer that can predict the future by 137 seconds, matter-destroying spores, a hunt in which the prey is a robot, and an electronic brain eager to go on the lam. These stories are peak Lem, exploring ideas and themes that resonate throughout his writing.

[Dialogues](#) Mar 29 2020 The first English translation of a nonfiction work by Stanislaw Lem, which was "conceived under the spell of cybernetics" in 1957 and updated in 1971. In 1957, Stanislaw Lem published *Dialogues*, a book "conceived under the spell of cybernetics," as he wrote in the preface to the second edition. Mimicking the form of Berkeley's *Three Dialogues between Hylas and Philonous*, Lem's original dialogue was an attempt to unravel the then-novel field of cybernetics. It was a testimony, Lem wrote later, to "the almost limitless cognitive optimism" he felt upon his discovery of cybernetics. This is the first English translation of Lem's *Dialogues*, including the text of the first edition and the later essays added to the second edition in 1971. For the second edition, Lem chose not to revise the original. Recognizing the naivete of his hopes for cybernetics, he constructed a supplement to the first dialogue, which consists of two critical essays, the first a summary of the evolution of cybernetics, the second a contribution to the

cybernetic theory of the "sociopathology of governing," amending the first edition's discussion of the pathology of social regulation; and two previously published articles on related topics. From the vantage point of 1971, Lem observes that original book, begun as a search for methods "that would increase our understanding of both the human and nonhuman worlds," was in the end "an expression of the cognitive curiosity and anxiety of modern thought."

The Investigation Nov 05 2020 An eerie and offbeat mystery by a Kafka Prize-winning author. The case confronting Lieutenant Gregory is not one that a man of Scotland Yard would expect. In fact, it is not one any sane man would care to entertain. Bodies are disappearing. The initial assumption is that a grave robber is roaming London and defiling local morgues. But upon further examination, it seems the deceased are, in fact, resurrecting. As Gregory stumbles his way through the tangled clues, seeking advice from scientific, philosophical, and theological experts alike, he finds himself tossed into a baffling metaphysical puzzle of incomprehensible truths and unbelievable realities. Hailed by Kirkus Reviews as "closer to Kafka than the police precinct house," Lem's intelligent and puzzling foray into the mystery genre offers an appealing combination of disturbance and delight.

Solar Lottery Nov 24 2019 Hired to work for Quizmaster Verrick, the man in charge of the strange game in which the ruler of the Universe is selected, Ted Bentley is unaware that Leon Cartwright, the man destined to take over Verrick's job, is targeted for assassination or that Verrick is plotting to resume control of a not-so-random universe. Reprint. 10,000 first printing.

Lemistry Oct 24 2019 We know Stanislaw Lem, whether or not we consciously know that we do. He may only be recognised in the West as the author of the twice-filmed novel, *Solaris*, but the influence of his other work is legion. From computer games (*The Sims* was inspired by one of his short stories), to films (the red and blue pills of *The Matrix* owe much to his Futurological Congress); from the space comedies of *Red Dwarf* to the metaphysical satires of Douglas Adams... the presence of this masterly Polish writer can be traced far and wide. Nor was his genius confined to fiction. Lem's essays and pseudo-essays borne out of the military industrial tensions of the Cold War have outlived their original context and speak to the most current developments in virtual reality, nanotechnology, and artificial intelligence. To celebrate his name, as well as his vision, this anthology brings together writers, critics and scientists who continue to grapple with his concerns. British and Polish novelists join screenwriters, poets, computer engineers, and artists, to celebrate and explore Lem's legacy through short stories and essays - two literary forms that, as Lem knew well, can blend together to create something altogether new. As one of the barriers to Lem's fame was language, this book also features specially commissioned translations: three stories never to have appeared in English before. Lem was always ahead of us. It's time we caught up.

Melchior Wankowicz Jan 07 2021 In *Melchior Wankowicz: Poland's Master of the Written Word*, Aleksandra Ziolkowska-Boehm examines the life and writing of famous Polish writer Melchior Wankowicz,

author of legendary work “The Battle of Monte Cassino”. Melchior Wankowicz was famous for creating his theory of reportage, i.e. the “mosaic method” where the events of many people were implanted into the life of one person. In this book, Ziolkowska-Boehm offers a critical examination of Wankowicz’s work informed by her experiences as his private secretary. Her access to the author’s personal archives shed new light on the life and work of the man considered by many to be “the father of Polish reportage.”

The Three Electroknight Nov 17 2021 'What use to a being that lives beneath a sun are jewels of gas and silver stars of ice?' From a giant of twentieth-century science fiction, these four miniature space epics feature crazy inventors, surreal worlds, robot kings and madcap machines. Penguin Modern: fifty new books celebrating the pioneering spirit of the iconic Penguin Modern Classics series, with each one offering a concentrated hit of its contemporary, international flavour. Here are authors ranging from Kathy Acker to James Baldwin, Truman Capote to Stanislaw Lem and George Orwell to Shirley Jackson; essays radical and inspiring; poems moving and disturbing; stories surreal and fabulous; taking us from the deep South to modern Japan, New York's underground scene to the farthest reaches of outer space.

From Literature to Biterature Feb 20 2022 From Literature to Biterature is based on the premise that in the foreseeable future computers will become capable of creating works of literature. Among hundreds of other questions, it considers: Under which conditions would machines become capable of creative writing? Given that computer evolution will exceed the pace of natural evolution a million-fold, what will such a state of affairs entail in terms of art, culture, social life, and even nonhuman rights? Drawing a map of impending literary, cultural, social, and technological revolutions, Peter Swirski boldly assumes that computers will leap from mere syntax-driven processing to semantically rich understanding. He argues that acknowledging biterature as a species of literature will involve adopting the same range of attitudes to computer authors (computors) as to human ones and that it will be necessary to approach them as agents with internal states and creative intentions. Ranging from the metafiction of Stanislaw Lem to the "Turing test" (familiar to scientists working in Artificial Intelligence and the philosophers of mind) to the evolutionary trends of culture and machines, Swirski's scenarios lay the groundwork for a new area of study on the cusp of literary futurology, evolutionary cognition, and philosophy of the future.

Microworlds Apr 22 2022 The author of *Solaris* critiques science fiction in a collection of provocative essays. Celebrated science fiction master Stanislaw Lem turns his always sharp and insightful pen to criticism in this bold and controversial analysis of the genre for which he is most known. In this collection of ten essays—ranging from an introspective examination of his own biographical and literary history to biting scrutiny of fellow authors and their works—Lem takes a keen look at the influence, shortcomings, merit, and importance of science fiction, touching on topics from Philip K. Dick (“a genius among the charlatans”) to time travel, cosmology, and Jorge Luis Borges. Whether deriding the genre’s tendency to adhere to well-worn patterns of adventure or lauding its ability to, when executed correctly, discover ideas that have not been thought of or done before, Lem’s quick wit, razor tongue, and impeccable insights make *Microworlds* a master class of scientific and literary analysis from one of the undisputed legends of science fiction.

Sweet Lechery Oct 04 2020 In *Sweet Lechery*, cultural journalist Jeet Heer offers a quirky collection of literary criticism that touches on a wide range of contemporary topics. From Margaret Atwood to Philip K. Dick, from Seth to Marshall McLuhan, Heer considers the literary and social contributions of canonical authors, artists, theorists and polemicists alike. Drawing from a variety of disciplines and genres, he links sex to economics, porn to high-brow literature, and tackles the oddball themes of cannibalism and vegetable sex in Canadian fiction. He examines the struggles of science fiction writers and the artistic opportunities of comic artists, weighing in on partisan politics for good measure. Rich with contextual detail and social commentary, these essays examine the cultural, historical and political forces that inform the books we read and write.

Science Fiction Literature in East Germany Sep 03 2020 East German science fiction enabled its authors to

create a subversive space in another time and place. One of the country's most popular genres, it outlined futures that often went beyond the party's official version. Many utopian stories provided a corrective vision, intended to preserve and improve upon East German communism. This study is an introduction to East German science fiction. The book begins with a chapter on German science fiction before 1949. It then spans the entire existence of the country (1949-1990) and outlines key topics essential to understanding the genre: popular literature, socialist realism, censorship, fandom, and international science fiction. An in-depth discussion addresses notions of high and low literature, elements of the fantastic and utopia as critical narrative strategies, ideology and realism in East German literature, gender, and the relation between literature and science. Through a close textual analysis of three science fiction novels, the author expands East German literary history to include science fiction as a valuable source for developing a multi-faceted understanding of the country's short history. Finally, an epilogue notes new titles and developments since the fall of the Berlin Wall.

Mortal Engines May 11 2021 'On one side of the ducats was stamped the radiant profile of Archithorius, on the other - an image of his six hundred arms' *Mortal Engines* is a selection of the best of Stanislaw Lem's extraordinary miniature space epics, chosen by his heroic translator Michael Kandel, who has somehow battled through Lem's jokes, parodies, fabricated technological terms and unreliable robots and brilliantly converted them from Polish into English. Encompassing his *Fables for Robots* and stories from his protagonists Ijon Tichy (from *The Star Diaries*) and Pirx the Pilot, this is a highly entertaining but also deeply alarming view of the glories and absurdities of Outer Space.

The Atheist's Bible Jun 12 2021 This intellectual history of a rumored book of heresy reveals a persistent undercurrent of atheism from the Middle Ages into the 18th century. In 1239, Pope Gregory IX accused Frederick II, the Holy Roman Emperor, of heresy. Without disclosing evidence of any kind, Gregory announced that Frederick had written a supremely blasphemous book—*De tribus impostoribus*, or the *Treatise of the Three Impostors*—in which Frederick denounced Moses, Jesus, and Muhammad as impostors. Of course, Frederick denied the charge, and over the following centuries the story played out across Europe, with libertines, freethinkers, and other “strong minds” seeking a copy of the scandalous text. The fascination persisted until finally, in the eighteenth century, someone brought the purported work into actual existence—in not one but two versions, Latin and French. Although historians have debated the origins and influences of this most apocryphal book, there has not been a comprehensive biography of the *Treatise of the Three Impostors*. In *The Atheist's Bible*, historian Georges Minois tracks the course of the book from its origins in 1239 to its most salient episodes in the seventeenth and eighteenth centuries, introducing readers to the colorful individuals obsessed with possessing the legendary work—and the equally obsessive passion of those who wanted to punish people who sought it. Minois’s compelling account sheds much-needed light on the power of atheism, the threat of blasphemy, and the persistence of free thought during a time when the outspoken risked being burned at the stake. “[A] timely and elegant study...Readers who are intrigued or scandalized by the diatribes of Richard Dawkins or Christopher Hitchens will discover in *The Atheist's Bible* that, as that other Bible says, there is nothing new under the sun.”—Walter Stephens, author of *Demon Lovers*

Highcastle Feb 26 2020 A playful, witty, reflective memoir of childhood by the science fiction master Stanisław Lem. With Highcastle, Stanisław Lem offers a memoir of his childhood and youth in prewar Lvov. Reflective, artful, witty, playful—"I was a monster," he observes ruefully—this lively and charming book describes a youth spent reading voraciously (he was especially interested in medical texts and French novels), smashing toys, eating pastries, and being terrorized by insects. Often lonely, the young Lem believed that he could communicate with household objects—perhaps anticipating the sentient machines in the adult Lem's novels. Lem reveals his younger self to be a dreamer, driven by an unbridled imagination and boundless curiosity. In the course of his reminiscing, Lem also ponders the nature of memory, innocence, and the imagination. Highcastle (the title refers to a nearby ruin) offers the portrait of a writer in his formative years.

One Human Minute May 23 2022 Essays by the author of Solaris: "Lem's delightful sense of humor accentuates his essential seriousness about humanity's possible fate" (Publishers Weekly). In One Human Minute, Stanisław Lem takes a hard look at our world and technology—what it means now and what dire implications it could have for the future—in satirical, wise, and biting prose. With this collection of three essays, Lem targets some of the most pressing issues humanity faces, from our unsettling origins to the cybernetic future of our weaponry. "The Upside-Down Evolution" chronicles the Earth's military evolution from nuclear stockpiles to deadly, robotic microweapons. "The World as Cataclysm" examines how humankind's dominance on Earth is the result of the extermination of another species just as qualified to rule the world. And the title essay presents a disturbing and fascinating snapshot of every single thing happening on the planet in a sixty-second span. Effortlessly blurring the lines between fiction and nonfiction, scientific essay and fantastical short story, cynical reproach and wry humor, Lem's One Human Minute combines the best elements of the renowned science fiction author and Kafka Prize winner's writing into one irreverent and intellectually stimulating package.

The Book of Legendary Lands Jun 19 2019 In the tradition of On Beauty, On Ugliness and The Infinity of Lists, Umberto Eco presents an enthralling and erudite illustrated tour of the fabled places that have awed and eluded us through the ages. From the epic poems of Homer to contemporary science fiction, from the Holy Scriptures to modern mythology and fairy tale, literature and art are full of illusory places we have at some time believed are real, and onto which we have projected our dreams, ideals and fears. Umberto Eco leads us on an illuminating journey through these legendary lands - Atlantis, Thule and Hyperborea, the Earth's interior and the Land of Cockaigne - and explores utopias and dystopias where our imagination can confront concepts that are too incredible, or too challenging, for our limited real world. In The Book of Legendary Lands the author's text is accompanied by several hundred carefully assembled works of art and literature; the result is a beautifully illustrated volume with broad and enduring appeal.

The Seventh Voyage Sep 15 2021 In this graphic adaptation of a story by Stanisław Lem, a meteoroid damages astronaut and space traveller Ijon's spaceship, and he finds himself caught in a time loop, contending with past and future versions of himself.

Return from the Stars Mar 21 2022 An astronaut returns to Earth after a ten-year mission and finds a society that he barely recognizes. Stanisław Lem's Return from the Stars recounts the experiences of Hal Bregg, an astronaut who returns from an exploratory mission that lasted ten years—although because of time dilation, 127 years have passed on Earth. Bregg finds a society that he hardly recognizes, in which danger has been eradicated. Children are "betriated" to remove all aggression and violence—a process that also removes all impulse to take risks and explore. The people of Earth view Bregg and his crew as "resuscitated Neanderthals," and pressure them to undergo betriation. Bregg has serious difficulty in navigating the new social mores. While Lem's depiction of a risk-free society is bleak, he does not portray Bregg and his fellow astronauts as heroes. Indeed, faced with no opposition to his aggression, Bregg behaves abominably. He is faced with a choice: leave Earth again and hope to return to a different society in several hundred years, or stay on Earth and learn to be content. With Return from the Stars, Lem shows

the shifting boundaries between utopia and dystopia.

A Perfect Vacuum Jul 25 2022 In a perfect vacuum, Stanisław Lem presents a collection of book reviews of nonexistent works of literature - works that, in many cases, could not possibly be written. Embracing postmodernism's "games for games' sake" ethos, Lem joins the contest with hilarious and grotesque results. Most of the "reviews" target the postmodern infatuation with antinarratives by lampooning their self-indulgence and exploiting their mannerisms. Lem exposes the limits of postmodern fiction, showing how its studious self-consciousness frequently conceals intellectual paucity. Beginning with a review of his own book, Lem moves on to tackle (or create pastiches of) the French new novel, James Joyce, pornography, authorless writing, and Dostoevsky, while at the same time ranging across scientific topics, from cosmology to the pervasiveness of computers.

Hospital of the Transfiguration Dec 26 2019 An early realist novel by Stanisław Lem, taking place in a Polish psychiatric hospital during World War II. Taking place within the confines of a psychiatric hospital, Stanisław Lem's The Hospital of the Transfiguration tells the story of a young doctor working in a Polish asylum during World War II. At first the asylum seems like a bucolic refuge, but a series of sinister encounters and incidents reveal an underlying brutality. The doctor begins to seek relief in the strange conversation of the poet Sekulowski, who is posing as a patient in a bid for safety from the occupying German forces. Meanwhile, Resistance fighters stockpile weapons in the surrounding woods. A very early work by Lem, The Hospital of the Transfiguration is partly autobiographical, drawing on the author's experiences as a medical student. Written in 1948, it was suppressed by Polish censors and not published until 1955. The censorship of this realist novel is partly what led Lem to focus on science fiction and nonfiction for the rest of his career.

The Invincible Aug 26 2022 A space cruiser, in search of its sister ship, encounters beings descended from self-replicating machines. In the grand tradition of H. G. Wells and Jules Verne, Stanisław Lem's The Invincible tells the story of a space cruiser sent to an obscure planet to determine the fate of a sister spaceship whose communication with Earth has abruptly ceased. Landing on the planet Regis III, navigator Rohan and his crew discover a form of life that has apparently evolved from autonomous, self-replicating machines—perhaps the survivors of a "robot war." Rohan and his men are forced to confront the classic quandary: what course of action can humanity take once it has reached the limits of its knowledge? In The Invincible, Lem has his characters confront the inexplicable and the bizarre: the problem that lies just beyond analytical reach.

Peace on Earth Feb 08 2021 Robot armies, an arms race in space, and a brain at war with itself add up to "a futuristic version of Dr. Jekyll and Mr. Hyde" (The Boston Phoenix). Anxious to avoid a war that would destroy the entire planet, the major powers of Earth have come to an ingenious compromise. Each country sends a force of adaptable, self-programming robots to the surface of the moon to play out the conflict there and, hopefully, reach a mutually agreeable stalemate. But when the robots stop responding, it is up to Ijon Tichy to travel to the lunar war zone and discover what went wrong. Tichy finds what he needs to know, but falls victim to an attack that severs the left and right sides of his brain: one of which knows nothing about the status of the moon, the other of which isn't telling. Now Tichy finds himself at the center of a new sort

of war of attrition, with each world power clamoring for his knowledge and each half of his stubborn brain clamoring for control. Wry and action-packed in equal measure, Stanislaw Lem's absurd, insightful sendup of the Cold War is required reading for any fan of science fiction. Here, "humor and a breathless pace create a delightful and thought-provoking read" (Publishers Weekly).

The Chain of Chance Jan 27 2020 Written in the style of a detective novel, *The Chain of Chance* is classic Lem: a combination of action, hard science, and philosophical investigation. An ex-astronaut is hired to look into the death of a wealthy businessman, one of several men to meet a gruesome end after visiting Naples. The authorities suspect a pattern, but neither the police nor a sophisticated computer enlisted for the investigation can crack the case. On a trail leading from Naples to Rome to Paris, the ex-astronaut barely escapes numerous threats on his life. Having set himself up as a potential victim, he realizes that he may now be the target of a deadly conspiracy - and that the conspiracy is not the work of a criminal mind but a manifestation of the laws of nature. The population has numerically exceeded its critical mass; certain patterns have begun to emerge from the chaotic workings of society. As the ex-astronaut unravels the puzzle, he begins to see that some of those patterns can be fatal.
