Canadian English Jan 07 2021 This textbook is the only one of its kind to introduce the study of Canadian English in the context of basic concepts of linguistics and sociolinguistics. The book provides foundational information on linguistic principles and on the different branches of sociolinguistics, ranging from the large-scale 'macro' study of language usage (the sociology of language, dialect surveys) to the 'micro' study of language use (sociophonetics, sociolinguistic variation and change). Each chapter highlights the different ways of collecting and analyzing data, including census data and historical texts, surveys and questionnaires, publically available corpora, and interviews. Mini-projects at the end of each chapter offer hands-on experience with the methods presented in the chapter. In addition to discussing the classic works in the study of Canadian English, this book engages with such contemporary issues as new-dialect formation, language and social identity, and ongoing language change, making it key reading for students taking courses in the areas of Canadian English, varieties of English, language variation, and sociolinguistics.

Concepts of Biology Oct 28 2022 *Concepts of Biology* is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is

relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Discovering Psychology: The Science of Mind Aug 02 2020 In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it. Global Indigenous Politics Dec 26 2019 This book examines how Indigenous peoples' rights and Indigenous rights movements represent an important and often overlooked shift in international politics - a shift that powerful states are actively resisting in a multitude of ways. While Indigenous peoples are often dismissed as marginal non-state actors, this book argues that far from insignificant, global Indigenous politics is potentially forging major changes in the international system, as the implementation of Indigenous peoples' rights requires a complete re-thinking and re-ordering of sovereignty, territoriality, liberalism, and human rights. After thirty years of intense effort, the transnational Indigenous rights movement achieved passage of the UN Declaration on the Rights of Indigenous Peoples in September 2007. This book asks: Why did movement need to fight so hard to secure passage of a bare minimum standard on Indigenous rights? Why is it that certain states are so threatened by an emerging international Indigenous rights regime? How does the emerging Indigenous rights regime change the international status quo? The questions are addressed by exploring how Indigenous politics at the global level compels a new direction of thought in IR by challenging some of its fundamental tenets. It is argued that global Indigenous politics is a perspective of IR that, with the recognition of Indigenous peoples' collective rights to land and self-determination, complicates the

structure of international politics in new and important ways, challenging both Westphalian notions of state sovereignty and the (neo-)liberal foundations of states and the international human rights consensus. Qualitative case studies of Canadian and New Zealand Indigenous rights, based on original field research, analyse both the potential and the limits of these challenges. This work will be of interest to graduates and scholars in international relations, Indigenous studies, international organizations, IR theory and social movements.
