Boilerplate Aug 30 2022 Meet Boilerplate, the world's first robot soldier—not in a present-day military lab or a science-fiction movie, but in the past, during one of the most fascinating periods of U.S. history. Designed by Professor Archibald Campion in 1893 as a prototype, for the self-proclaimed purpose of “preventing the deaths of men in the conflicts of nations,” Boilerplate charged into combat alongside such notables as Teddy Roosevelt and Lawrence of Arabia. Campion and his robot also circled the planet with the U.S. Navy, trekked to the South Pole, made silent movies, and hobnobbed with the likes of Mark Twain and Nikola Tesla. You say you've never heard of Boilerplate before? That's because this book is the fanciful creation of a husband-and-wife team who have richly imagined these characters and inserted them into accurate retellings of history. This full-color chronicle is profusely illustrated with graphics mimicking period style, including photos, paintings, posters, cartoons, maps, and even stereoscope cards. Part Jules Verne and part Zelig, it's a great volume for a broad range of fans of science fiction, history, and robots.

Mental Illness and American Society, 1875-1940 Feb 21 2022 Gerald N. Grob's Mental Institutions in America: Social Policy to 1875 has become a classic of American social history. Here the author continues his investigations by a study of the complex interrelationships of patients, psychiatrists, mental hospitals, and government between 1875 and World War II. Challenging the now prevalent notion that mental hospitals in this

period functioned as jails, he finds that, despite their shortcomings, they provided care for people unable to survive by themselves. From a rich variety of previously unexploited sources, he shows how professional and political concerns, rather than patient needs, changed American attitudes toward mental hospitals from support to antipathy. Toward the end of the 1800s psychiatrists shifted their attention toward therapy and the mental hygiene movement and away from patient care. Concurrently, the patient population began to include more aged people and people with severe somatic disorders, whose condition precluded their caring for themselves. In probing these changes, this work clarifies a central issue of decent and humane health care. Gerald N. Grob is Professor of History at Rutgers University. Among his works are *Mental Institutions in America: Social Policy to 1875* (Free Press), *Edward Jarvis and the Medical World of Nineteenth-Century America* (Tennessee), and *The State and the Mentality III* (North Carolina). Originally published in 1983. The Structure of Human Abilities (Psychology Revivals) Jan 23 2022 First published in 1950, this revised edition of The Structure of Human Abilities was published in 1961, but remained largely unchanged from the original save for an additional supplement on the developments in factorial work on human abilities from 1950-1959. Much research had been carried out during the years leading up to publication, in England and America, into mental abilities; and modern methods of statistical treatment, especially factor analysis, had been increasingly used. It was felt that the mass of diverse material was apt to confuse the student of psychology of the time, especially as the results of such research were often apparently conflicting. Professor Vernon, one of the leading experts in this branch of psychology, sifted the material and attempted to provide a consistent picture of our mental structure.
