Proceedings of the 5th Brazilian Technology Symposium Oct 29 2019 This book presents the proceedings of the 5th Edition of the Brazilian Technology Symposium (BTSym). This event brings together researchers, students and professionals from the industrial and academic sectors, seeking to create and/or strengthen links between issues of joint interest, thus promoting technology and innovation at nationwide level. The BTSym facilitates the smart integration of traditional and renewable power generation systems, distributed generation, energy storage, transmission, distribution and demand management. The areas of knowledge covered by the event are Smart Designs, Sustainability, Inclusion, Future Technologies, IoT, Architecture and Urbanism, Computer Science, Information Science, Industrial Design, Aerospace Engineering, Agricultural Engineering, Biomedical Engineering, Civil Engineering, Control and Automation Engineering, Production Engineering, Electrical Engineering, Mechanical Engineering, Naval and Oceanic Engineering, Nuclear Engineering, Chemical Engineering, Probability and Statistics.

TISS-NET Exam Prep Book 2022 / 1400+ Solved Questions (8 Full-length Mock Tests + 9 Sectional Test + 3 Previous Year Paper) Oct 22 2021 • Best Selling Book for TISS-NET Exam with objective-type questions as per the latest syllabus given by the Tata Institute of Social Sciences. • Compare your performance with other students using Smart Answer Sheets in EduGorilla's TISS-NET Exam Practice Kit. • TISS-NET Exam Preparation Kit comes with 20 Tests (8 Full-length Mock Tests + 9 Sectional Tests + 3 Previous Year Papers) with the best quality content. • Increase your chances of selection by 14X. • TISS-NET Exam Prep Kit comes with well-structured and 100% detailed solutions for all the questions. • Clear exam with good grades using thoroughly Researched Content by experts.

Industrial Competitiveness and Design Evolution Mar 27 2022 This book integrates the concept of design into the existing framework of industrial performance, international trade and comparative advantage in trade and industrial phenomena, which increasingly have been affected by design characteristics of tradable goods. Design, capability and their evolution are introduced into current theories of trade to explain the reality of international trade in the early twenty-first century and the possibility of design-based comparative advantage is explored. Toward that end, the concepts of design, architecture, organizational capability and productivity are introduced, as are their interactions and evolution. The author starts from the fact that firms' selection of design locations precedes that of production locations and that a new product's initial production location is usually the same as its design location. In other words, design matters in explaining today's trade phenomena. Thus, this book analyzes product design and its evolution in the context of the comparative advantage theory. The author argues that the concept of Ricardo's comparative advantage must be reinterpreted in a more dynamic way than in the past, with changing labor input coefficients treated as variables and driven by international capability-building

competition between factories. Some of the many topics dealt with in this volume include a capability-architecture view of industrial comparative advantage, a design-based view of manufacturing, the evolution of manufacturing capabilities, Ricardian comparative advantage with changing labor input coefficients, comparative design cost and selection of design locations and a design process model behind comparative design cost. In this way, the behaviors of factories, product development projects, firms, industries and national economies in today's global competition are described and analyzed in the most realistic way.

Journalism in the Age of Virtual Reality Jan 01 2020 With the advent of the internet and handheld or wearable media systems that plunge the user into 360o video, augmented—or virtual reality—technology is changing how stories are told and created. In this book, John V. Pavlik argues that a new form of mediated communication has emerged: experiential news. Experiential media delivers not just news stories but also news experiences, in which the consumer engages news as a participant or virtual eyewitness in immersive, multisensory, and interactive narratives. Pavlik describes and analyzes new tools and approaches that allow journalists to tell stories that go beyond text and image. He delves into developing forms such as virtual reality, haptic technologies, interactive documentaries, and drone media, presenting the principles of how to design and frame a story using these techniques. Pavlik warns that although experiential news can heighten user engagement and increase understanding, it may also fuel the transformation of fake news into artificial realities, and he discusses the standards of ethics and accuracy needed to build public trust in journalism in the age of virtual reality. Journalism in the Age of Virtual Reality offers important lessons for practitioners seeking to produce quality experiential news and those interested in the ethical considerations that experiential media raise for journalism and the public.

Socio-Cognitive and Affective Computing Mar 15 2021 This book is a printed edition of the Special Issue "Socio-Cognitive and Affective Computing" that was published in Applied Sciences

Smart and Flexible Energy Devices Apr 15 2021 The scientific community and industry have seen tremendous progress in efficient energy production and storage in the last few years. With the advancement in technology, new devices require high-performance, stretchable, bendable, and twistable energy sources, which can be integrated into next-generation wearable, compact, and portable electronics for medical, military, and civilian applications. Smart and Flexible Energy Devices examines the materials, basic working principles, and state-of-the-art progress of flexible devices, like fuel cells, solar cells, batteries, and supercapacitors. Covering the synthesis approaches for advanced energy materials in flexible devices and fabrications and fundamental design concepts of flexible energy devices, such as fuel cells, solar cells, batteries, and supercapacitors, top author teams explore how newer materials with advanced properties are used to fabricate the energy devices to meet the future demand for flexible electronics. Additional features include: Addressing the materials, technologies, and challenges of various flexible energy devices under one cover Emphasizing future demand and challenges of the field Considering all flexible energy types, like fuel cells, solar cells, batteries, and supercapacitors Suitability for undergraduate and postgraduate students of material science and energy programs This is a valuable resource for academics and industry professionals working in the field of energy materials, nanotechnology, and energy devices.

Implementing Mobile TV Jan 25 2022 An in-depth guide to the new world of Mobile TV, multimedia networks, and applications.

The Functional Treatment of Parsing Jun 25 2019 Parsing technology traditionally consists of two branches, which correspond to the two main application areas of context-free grammars and their generalizations. Efficient deterministic parsing algorithms have been developed for parsing programming languages, and quite different algorithms are employed for analyzing natural language. The Functional Treatment of Parsing provides a functional framework within which the different traditional techniques are restated and unified. The resulting theory provides new recursive implementations of parsers for context-free grammars. The new implementations, called recursive ascent parsers, avoid explicit manipulation of parse stacks and parse matrices, and are in many ways superior to conventional implementations. They are applicable to grammars for programming languages as well as natural languages. The book has been written primarily for students and practitioners of parsing technology. With its emphasis on modern functional methods, however, the book will also be of benefit to scientists interested in functional programming. The Functional Treatment of Parsing is an excellent reference and can be used as a text for a course on the subject.

Esports For Dummies Apr 27 2022 Discover the path to the big leagues It's time to prove all those people who said "video games are a waste of time" wrong. Esports has rewarded top gamers with prize money, glory, and even college scholarships. Want to get in on the action? This book puts you on the path to get your share of the growing world of esports. It helps you figure out the gear you need to be competitive, the games that drive esports, how to break into competitive play, and how to use online platforms to get attention. Written by the esports program director at the first Division I university to field an esports team, this book defines and demystifies the complex world of competitive video gaming. Get the gear for your first esports battles Gain recognition for your skills online or in tournaments Discover the path to earning scholarships in esports Build your online identity Get the insider tips you need to make your name in the esports universe.

Drafting Technology Patent License Agreements May 17 2021 In todayand's fast-paced and ultra-competitive high-tech environment, an effectively managed patent licensing program is a must. The Second Editio n of Drafting Technology Patent License Agreements shows you how to achieve one. This valuable resource covers all of the legal and business transactional issues you are likely to encounter during the drafting and negotiation of patent licensing agreements. It guides you step-by-step through the unique

aspects of the implementation of a patent licensing program for computers, electronics, telecommunications, and other industries, and it clarifies the issues involved in the enforcement and litigation of these patents. You and'll find incisive legal analysis on complex issues including: How to implement an aggressive and well-managed patent licensing program How to evaluate a patent or portfolio for licensing How to identify industry segments and select potential licensees How to discuss terms with industry targets How to formulate an effective licensing strategy How to use databases effectively in patent practice How to organize a licensing team How to file a patent infringement lawsuit And many more critical issues like these. Included with this key resource are 40 time-saving forms on the bonus CD-ROM: Forms for establishing a new technology company using patented technology Confidentiality agreements (for a third-party vendor, third party evaluation, or consultant) A projected royalty stream analysis A semiconductor technology cross-licensing agreement Software technology license agreements Model licensing and patent agreements for the telecommunications industry And many more!

I-Bytes Technology Industry Jul 31 2022 This document brings together a set of latest data points and publicly available information relevant for Technology. We are very excited to share this content and believe that readers will benefit immensely from this periodic publication immensely.

Market Entry Strategies Jun 17 2021 The first part of the book introduces relevant theories of internationalization. In addition to traditional concepts of internationalization (e.g., the product life-cycle approach of Vernon, the Uppsala model, and Porter's diamond approach), particular attention is paid to the more modern network approaches of internationalization (e.g., systems, new venture/born global, and entrepreneur concepts). In the second part, alternatives for international market entry (e.g., exports, franchising, joint ventures, contract manufacturing, and foreign direct investments) are explained. These market entry modes are categorized according to decision determinants, such as hierarchical control, proximity to the market, risk of investment, and the factor of time, which are important from the point of view of the corporate management involved in international business. The empirical part of this publication, which is the result of a longitudinal study, consists of case studies of Asian firms doing business in the consumer electronics industry. The cases of Samsung, Sony, Sharp, Matsushita (Panasonic), LG Electronics, and TCL China provide fundamental insights into the firms' organizational structures, corporate cultures, respective sales volume, and earnings performance as well as strategic concepts for their market penetration in Europe. A main emphasis is placed on an understanding of internal firm networks (e.g., diversified business fields and vertical production depth) and external firm networks (e.g., joint ventures, supplier and buyer clusters as well as mutual capital interests). From the author's view, these network grids fundamentally contribute to the fact that Asian firms have more successfully positioned themselves in the market within the last two decades compared to their European competitors in the television set industry (e.g. Grundig, Thomson, or Philips). The networking aims and success factors as well as the changing strategic influence over the years of the partner firms both in bilateral Japanese joint ventures and in European-Asian joint ventures are examined. The book provides complex background information about the development of the European television set

market. The analysis demonstrates that firms holding the position of technological market leaders in their segment simultaneously indicate the most intensive network activities. The further development of the network theory and the detailed and up-to-date case studies of the most important Asian enterprises in the consumer electronics industry contribute to the value of this publication. Furthermore, on the basis of the knowledge gained from this study, chances and risk potentials can be derived for other European industries (e.g., automotive). The book, written in English, is suitable for internationally oriented bachelor's, master's and MBA programs. Additionally, against the background of worldwide competition, the publication at hand offers relevant industry insights for interested political and economic decision makers.

Emerging-market Multinational Enterprises in East Central Europe Dec 24 2021 The rise of multinational enterprises (MNEs) from emerging markets is topical, important and poses a number of questions and challenges that require considerable attention in the future from academia as well as business management. The recent takeovers of high-profile companies in developed or developing countries by non-European emerging-market MNEs (EMNEs) – such as Lenovo, Wanhua (China), Hindalco (India), CVRD (Brazil), Cemex (Mexico), Lukoil (Russia), etc. – as well as the greenfield or brownfield investments of emerging companies (such as Huawei, ZTE, Tata, Pepco, etc.) show a new trend where new kind of firms become major players globally. EMNEs have become important players in several regions around the globe, ranging from the least developed countries of Africa through the developing markets in Latin America and Asia to the developed countries of the United States or the European Union, including East Central European (ECE) countries. EMNEs presence on the global level has resulted in numerous studies in the international literature but those research results barely cover EMNEs' activities in the ECE region (in the East Central European EU member countries, including the Czech Republic, Hungary, Poland, Slovakia and Slovenia). The existing books typically focus on the investment activity of a single country or region (such as China or East Asia) but a comprehensive analysis is still missing in this regard. The novelty of this edited volume is that it aims at exploring EMNEs location determinants, strategies, activities and challenges in East Central Europe by discussing its anomalies to the traditional theories as well as to other types of MNEs in the ECE region. The authors focus on EMNEs not only from China but from other important emerging countries, too, such as Russia, India, South Korea, Taiwan, Turkey, Brazil or South Africa.

Kazakh Mar 03 2020 Kazakh: A Comprehensive Grammar is the first thorough analysis of Kazakh to be published in English. The volume is systematically organized to enable users to find information quickly and easily, and provides a thorough understanding of Kazakh grammar, with special emphasis given to syntax. Features of this book include: descriptions of phonology, morphology and syntax; examples from contemporary usage; tables summarizing discussions, for reference; a bibliography of works relating to Kazakh. Kazakh: A Comprehensive Grammar reflects the richness of the language, focusing on spoken and written varieties in post-Soviet Kazakhstan. It is an essential purchase for all linguists and scholars interested in Kazakh or in Turkic languages as well as advanced learners of Kazakh.

International Marketing Management Jul 07 2020 This is a basic text in International Marketing, a major knowledge area for students of management studies. This book attempts to make learning of the nuances of the subject easy and enjoyable for students. International trade, economic free trade zones, embargoes on exports, and tariff and non-tariff barriers that the companies face overseas form a major part of the book. In addition, the role of international organizations under the guidance of the United Nations has been given its due importance.

Basic Research And Industrial Innovation In China Feb 11 2021 Chinese enterprises have relied on importing technology and imitation as their main technology strategies in the past. Based on analysis of cross-countries' case studies and the history of industrial innovation, the authors proposed the concept of industry-driven basic research and expounds the important role of scientific discovery in industrial technological innovation. They are convinced that both the government and enterprises should focus on industry-driven basic research in order to bridge the gap between the government's target and what enterprises actually do in China. The challenge remains to be seen if China can transform Science and technology investment into real industrial innovation capability.

Ad \$ Summary Nov 03 2022 Advertising expenditure data across multiple forms of media, including: consumer magazines, Sunday magazines, newspapers, outdoor, network television, spot television, syndicated television, cable television, network radio, and national spot radio. Lists brands alphabetically and shows total expenditures, media used, parent company and PIB classification for each brand. Also included in this report are industry class totals and rankings of the top 100 companies in each of the media.

Advertising by Design Aug 27 2019 A real-world introduction to advertising design and art direction, updated and revised for today's industry The newly revised Fourth Edition of Advertising by Design: Generating and Designing Creative Ideas Across Media delivers an invigorating and cutting-edge take on concept generation, art direction, design, and media channels for advertising. The book offers principles, theories, step-by-step instructions, and advice from esteemed experts to guide you through the fundamentals of advertising design and the creative process. With a fresh focus on building a coherent brand campaign through storytelling across all media channels, Advertising by Design shows you how to conceive ideas based on strategy, build brands with compelling advertising, and encourage social media participation. You'll also get insights from guest essays and interviews with world-leading creatives in the advertising industry. The book is filled with practical case studies that show real-world applications. You'll also benefit from coverage of A quick start guide to advertising A thorough introduction to what advertising is, including its purpose, categories, forms, media channels, social media listening, and its creators Creative thinking strategies and how to generate ideas based on creative briefs Utilizing brand archetypes and creating unique branded content Composition by design, including the parts of an ad, the relationship between images and copy, basic design principles, and points of view How to build a brand narrative in the digital age Copywriting how-to's for art directors and designers Experiential advertising An examination of digital design, including subsections on the basics of mobile and desktop website design, motion, digital branding, and social media design Perfect for students and instructors of advertising design, art direction, graphic design, communication design, and copywriting, Advertising by Design also will earn a place in the libraries of business owners, executives, managers, and employees whose work requires them to understand and execute on branding initiatives, advertising campaigns, and other customer-facing content.

Marketing Management, 2nd Edition Jan 13 2021 Marketing is a way of doing business. It is all pervasive, a part of everyone's job description. Marketing is an expression of a company's character, and is a responsibility that necessarily belongs to the whole company and everyone in it.

Energy Level Alignment and Electron Transport Through Metal/Organic Contacts Aug 08 2020 In recent years, ever more electronic devices have started to exploit the advantages of organic semiconductors. The work reported in this thesis focuses on analyzing theoretically the energy level alignment of different metal/organic interfaces, necessary to tailor devices with good performance. Traditional methods based on density functional theory (DFT), are not appropriate for analyzing them because they underestimate the organic energy gap and fail to correctly describe the van der Waals forces. Since the size of these systems prohibits the use of more accurate methods, corrections to those DFT drawbacks are desirable. In this work a combination of a standard DFT calculation with the inclusion of the charging energy (U) of the molecule, calculated from first principles, is presented. Regarding the dispersion forces, incorrect long range interaction is substituted by a van der Waals potential. With these corrections, the C60, benzene, pentacene, TTF and TCNQ/Au(111) interfaces are analyzed, both for single molecules and for a monolayer. The results validate the induced density of interface states model.

Cultural Translation of Management Philosophy in Asian Companies Sep 28 2019 This book discusses management philosophy based on case studies in companies in Japan, Korea and China. In an era of increasing globalization and the internet society, it is time for companies to re-examine their mission and existence. Repeated corporate scandals and global environmental issues have revealed the need for CSR (corporate social responsibility) and business ethics. At the same time, cross-cultural conflicts in the workplace highlight the necessity for management to integrate multiple values. In other words, the importance of value in a company has to be reconsidered. This timely book re-evaluates the issue of management philosophy in the context of the global society. It approaches the issue of management philosophy from the perspective of keiei-jinruigaku, the anthropology of business administration, presenting interdisciplinary research consisting of fields such as management studies, anthropology, religious studies and sociology. By focusing on the phenomena of transmission of management philosophy to other areas by cultural translation, the book reveals the dynamic process of the global transmission of management philosophy.
